CERN Data Analytics Project

## Improving CERN Accelerator Complex Operations with Data Analytics

Antonio Romero Marín

What is CERN

- CERN - European Laboratory for Particle Physics
- Founded in 1954 by 12 countries for fundamental physics research in a post-war Europe
  - "Science for Peace"

Real-Time Analytics: Making better and faster business decisions

Distribution of All CERN Users by Nationality on 14 January 2014

CERN Mission

Discoveries
Seeking answers to questions about the Universe

International Cooperation
Uniting bringing nations together through science

Science & Education
Training tomorrow's scientists and engineers

Science & Technology
Advancing the frontiers of technology

Real-Time Analytics: Making better and faster business decisions

What is the Universe made of?

How does it work?

Why do particles have mass?

Higgs Boson Discovery
2012

Higgs to 4μ candidate event
ATLAS EXPERIMENT
http://atlas.ch

Run: 204769
Event: 71902630
Date: 2012-06-10
Time: 13:24:31 CEST

The Standard Model
# Fundamental Research

- What is dark matter and dark energy?

Composition of the Universe

- Why is there far more matter than antimatter in the universe?
 - Big Bang should have created equal amounts of matter and antimatter

Fundamental Research

- What was the state of the matter in the very first moments of the Universe?

Real-Time Analytics: Making better and faster business decisions
CERN Instruments

Accelerators

Boost particles to high energies and speed to collide

Detectors

Observe and record the results of these collisions

The Large Hadron Collider (LHC)

- **Largest machine** in the world
  - 27km, 6000+ superconducting magnets

- **Fastest racetrack** on Earth
  - Protons circulate 11245 times/s (99.9999991% the speed of light)

- **600 million** collisions per second
  - Generating approximately one petabyte of data per second

The Large Hadron Collider (LHC)

- **Emptiest place** in the solar system
  - High vacuum inside the magnets

- One of the **coldest places** on Earth
  - Main magnets operate at a temperature of 1.9 K (-271.3°C)

- **Hottest spot** in the galaxy
 - During Lead ion collisions create temperatures 100000x hotter than the heart of the sun

ATLAS Detector

150 Million of sensor

Control and detection sensors

Massive 3D camera

Capturing 40+ million collisions per second
Data rate TB per second

The CERN Accelerator Complex

▶ p (proton)	▶ ion	▶ neutrons	▶ p̄ (antiproton)	▶ electron	↦↦ proton/antiproton **conversion**

LHC Large Hadron Collider   **SPS** Super Proton Synchrotron   **PS** Proton Synchrotron

AD Antiproton Decelerator   **CTF3** Clic Test Facility   **AWAKE** Advanced WAKefield Experiment   **ISOLDE** Isotope Separator OnLine DEvice

LEIR Low Energy Ion Ring   **LINAC** LINear ACcelerator   **n-ToF** Neutrons Time Of Flight   **HiRadMat** High-Radiation to Materials

CERN Accelerator Complex is unique installation
> Therefore, we have to face unique challenges

Control and operations
> Many critical systems: Cryogenics, Vacuums, Machine Protection, etc.
> Million of sensors, large number of control devices, front-end equipment, etc.

CERN is a extreme data environment

- Physics Data
  - Over 30 petabytes per year

- Control and operations
  - Million of sensors, signals
  - Large number of control devices
  - Equipment

- Monitoring and logging

- Supporting IT infrastructure
  - Databases
 - Network
  - Services
CERN Data Investment

- CERN has great monitoring and logging systems
  - Large amount of data has been stored over years

- Accelerator Logging Service around 275 GB/day
  - Storing more than 50 TB / year
  - Data aquisition
    - CERN accelerator complex
    - related subsystems
    - experiments
  - Around 1 million signals

Real-Time Analytics: Making better and faster business decisions
Data Analytics Challenges

- Some faults cannot be avoid

- Decrease the availability for running physics

- Corrective interventions needed
A look into the Future

- ## LHC upgrades will further increase luminosity
  - ### Computing resources needs will be higher
  - ### Data generated will increase drastically

Table 17: HLT Rate Evolution

Hz	ALICE	ATLAS	CMS	LHCb
2012	400 Hz 330 MB/s (p-p) 540 MB/s (p-Pb)	550 Hz 440 MB/s	460+360 Hz 328 MB/S	5000 Hz 300 MB/s
2015	500 Hz 525 MB/s (p-p) 810 MB/s (p-Pb) 3750 MB/s (Pb-Pb)	1000 Hz 800-1000 MB/s	1000 Hz 600 MB/S	10000 Hz 750 MB/s
- ## Next accelerators
  - ### Future Circular Collider (80-100 km)

Real-Time Analytics: Making better and faster business decisions

The objective – Improve our systems

Monitoring and Diagnostics Systems

Data Analytics

Predictive and Proactive systems

Real-Time Analytics: Making better and faster business decisions

Data Analytics Project

- ## Optimize our systems
  - Reducing and predicting faults and corrective interventions
  - Increase the availability and operations efficiency

- ## Profit from CERN data investment by using data analytics
  - Extract knowledge
  - Discover useful information
  - Suggest conclusions
  - Support decision making

- ## Control and Monitoring Systems
  - Proactive
  - Predictive
  - Intelligent

Real-Time Analytics: Making better and faster business decisions

Data analytic challenges at CERN

- Very dynamic and heterogeneous environment
  - Large number projects with different needs
  - Technologies
  - Data sources

- Large amount of data
  - Raw data, structured and unstructured data

- Education and Training
  - Users know their systems and data
  - Help them to use data analytics

Real-Time Analytics: Making better and faster business decisions

Data analytic challenges at CERN

- Analytics as a service
  - Analytics platform
  - Multiple sources of data
  - Visualization
  - Data processing
  - Easy access

Real-Time Analytics: Making better and faster business decisions
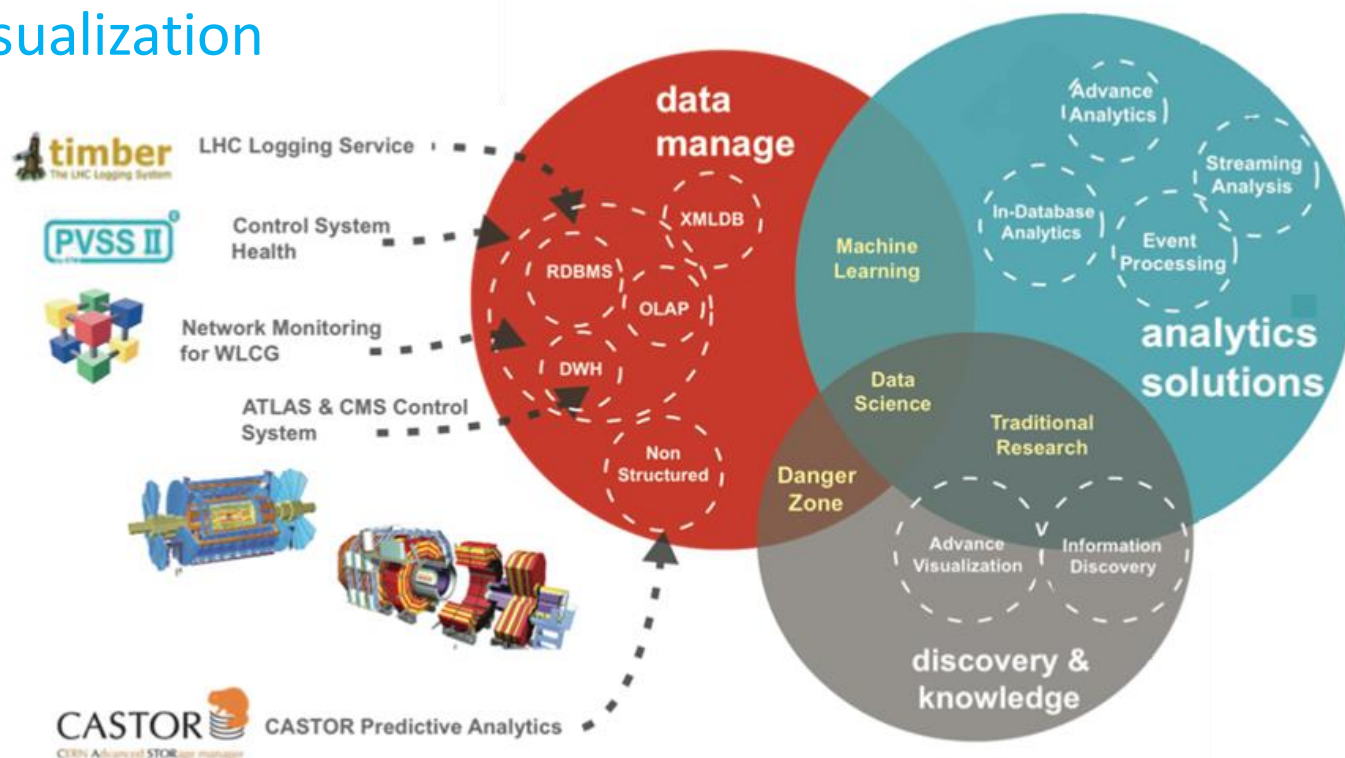

Data Analytics Use Cases

Use Case: CERN Advance Storage Manager (CASTOR)

- ## Mass Storage Solution for managing physics data files
  - 12k disks, 30k tapes
 - 100 PB on tape, 50 PB on disk
  - +300 M files
Use Case: CERN Advance Storage Manager (CASTOR)

- **Optimization**
  - Performance
  - Cause of errors

- **Predictive analytics**
  - Anomaly detection
  - Early warning systems

Use Case: Intelligent Data Placement for CMS

- Collaborative network of data centers to transmit, store, process and analyze LHC data

- Over 8000 physicists

Use Case: Intelligent Data Placement for CMS

- CMS Data Popularity
  - Monitors along time the usage of data accessed by users

- Resources optimization
  - Minimize number of replicas
  - Remove Obsolete
  - Job time in data access
  - Job time in data analysis

- Resources Prediction

Use Case: Operation and Control Systems

- LHC Accelerator Logging Service
 - Around 1 million signals
    - Temperatures, electrical currents
    - Magnetic field strengths
    - Vacuum pressures, etc.

- Control system Health
 - Gas Breakdown
 - Vacuum
  - Machine Protection

- Predictive maintenance

Real-Time Analytics: Making better and faster business decisions

Use Case: Cryogenics Faulty Valves Detection

- ## What is the objective?
  - Predict faulty valves before they actually fail

- ## How?
  - Valve receive an aperture order value (**aperture order**)
  - Effective aperture realized by the valve (**aperture measured**)
  - Analyzing the difference between both (**S** = **aperture order - aperture measured**)
Use Case: Cryogenics Faulty Valves Detection

- Signals used
  - S = aperture order - aperture measured
- Features extractions based on S
  - Variance
  - Percentile 99.9
  - Rope distance
  - Noise Band
- Three different status
  - Faulty
  - Not faulty
  - Unknown
- **Predictive model**
  - SVM - Support Vector Machine

Real-Time Analytics

- For our use cases is key to process the data in real-time
  - Data streaming and Complex Event Processing
  - Early warning systems
  - Real-time data visualization and discovery

- New platforms aim to facilitate the use
  - Quick development and prototype of predictive models
  - Multiple languages (Scala, R, Python, Java, etc…)
  - Complete stack
  - Cloud based
