

# openlab Web Site

Facelift  
and  
Procedures for enriching it

*François Fluckiger  
Ryszard Jurga*

---

## Objectives

- Facilitate Enrichment of **Technical Content**
  - Create missing description of “Projects” or “Activities”
  - Update/enrich existing descriptions more systematically
  
- Maintain / update more systematically **Administrative Data**
  - News (to be re-organized)
  - Technical Publications (Articles, ... )
  - Press coverage
  - Lists of people
  - Events

New version coming in 2007

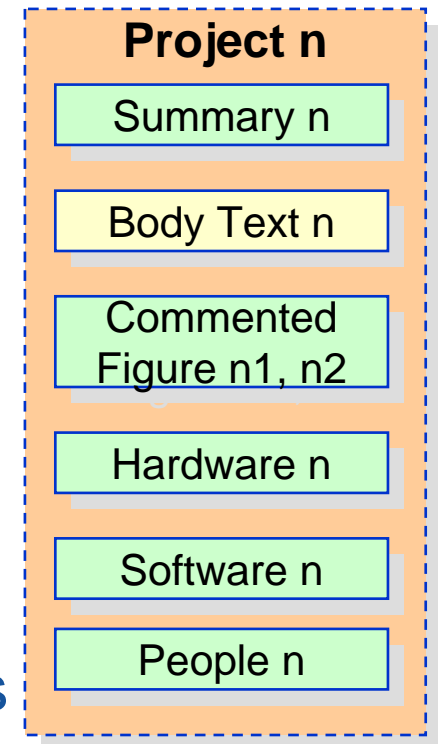

## Technical Changes

- Several technical novelties (see Ryszard)
- No longer two sites (“public” / “production”)
  - All moved under [cern.ch/openlab](http://cern.ch/openlab)
- New philosophy to be used by Web Content Authors

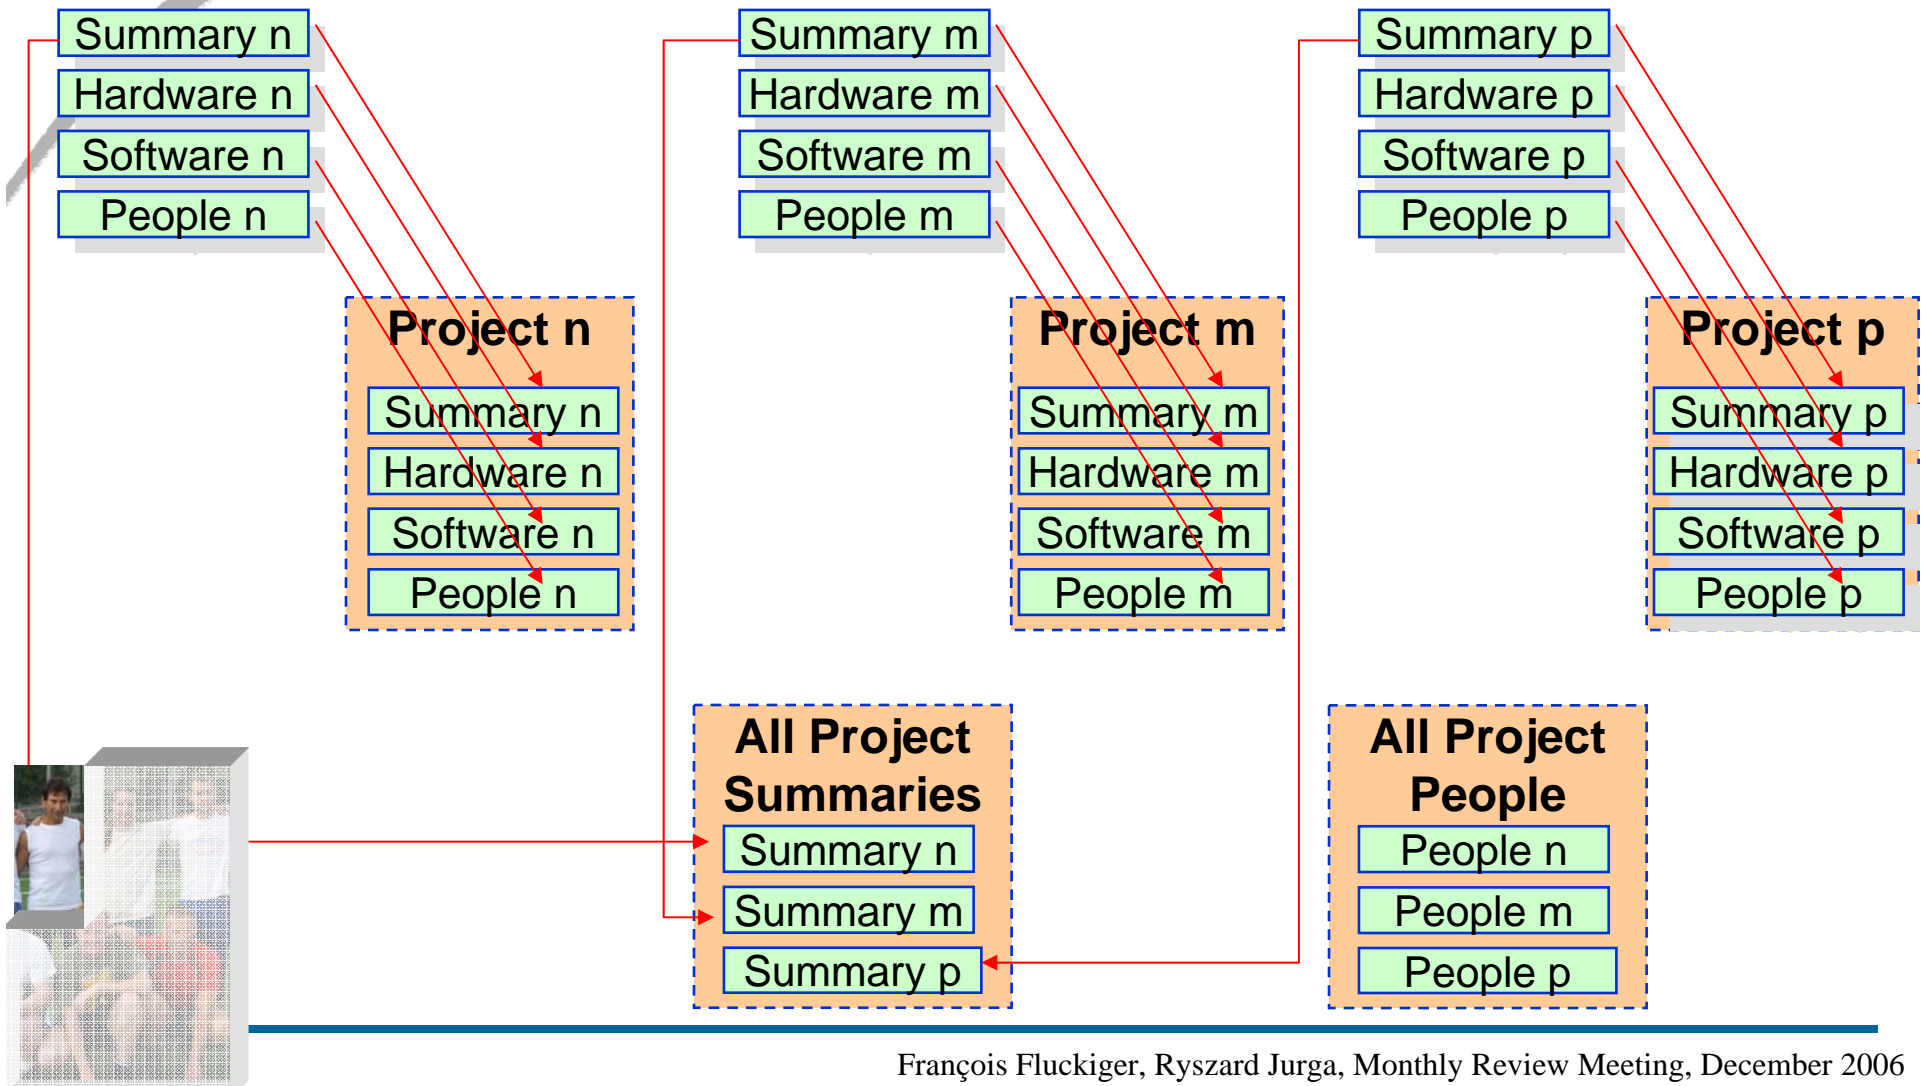

## For Technical Team to prepare Content: Modularity

- Design content as formed of **individual small pieces** (items) which can be combined
- E.g.: A text about a project containing
  - A summary of the project
  - Body Text
  - A few figures with associated comments
  - The Hardware description
  - The Software environment
  - The list of people working on it
  - ...

May be formed of multiple individual items

## Easy creation of content by aggregations of items

## Technical Novelties

- Friendly printing
- Drop-down menus

- Printer-Friendly Web Pages
  - without navigation
  - without non-essential images
  - right font and size
  - undelining links
  - right background color
  - including original URL
  - including copyright notification
  - margin adjustment
  
- Drop-down menu

- copy of every page with manually removed all non-printer-friendly stuff
  - duplication
  - `<!--webbot bot ... >`
- use script to remove n-p-f stuff on the fly
  - can be set up for every page
  - requires programming
- special style sheet for print
  - `<link rel="stylesheet" type="text/css" href="print.css" media="print" />`
  - the attribute media – screen, **print**, aural, tv,...

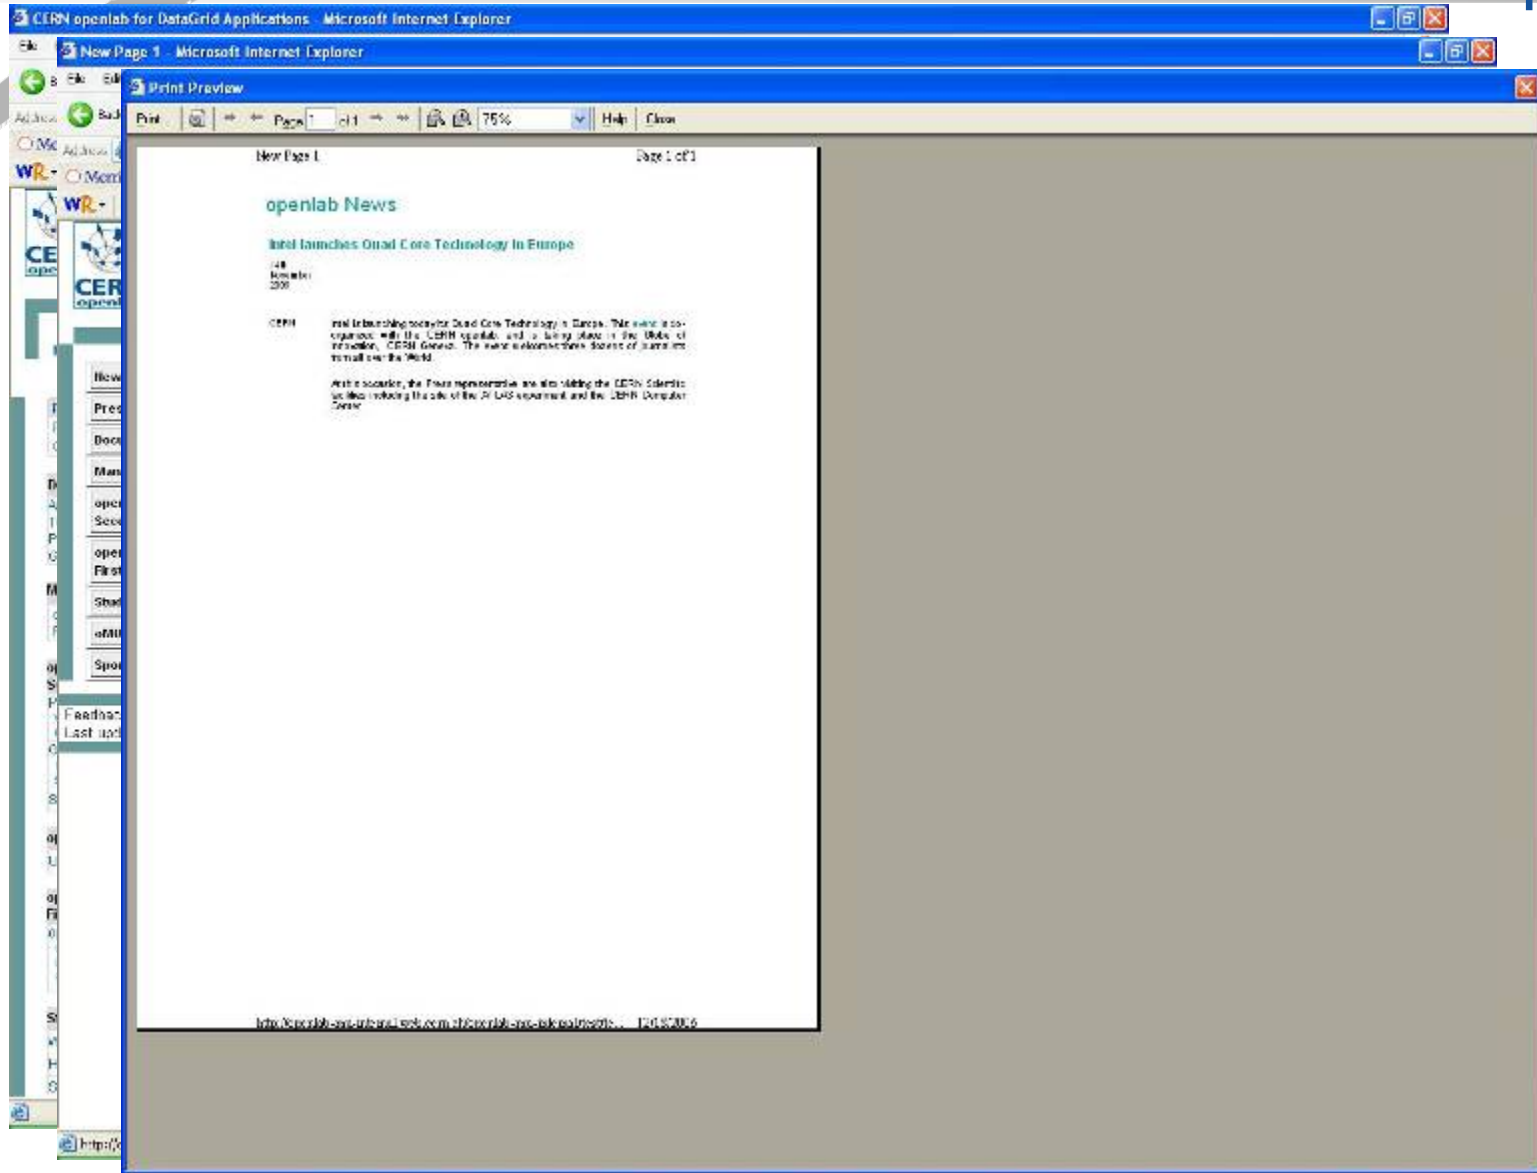

- dynamic :hover pseudo-class on all elements
  - IE supports only <a>
  - HTML Components (HTCs)
    - mechanism to implement components as DHTML behaviours
  - built by unordered lists <ul> and list items <li>

```
<ul>
  <li>CSS Menu
    <ul>
      <li><a href="#">Sub Menu #1</a></li>
      <li><a href="#">Sub Menu #2</a></li>
    </ul>
  </li>
</ul>
```

openlab

# Print-friendly and drop-down menu example

## Objectives

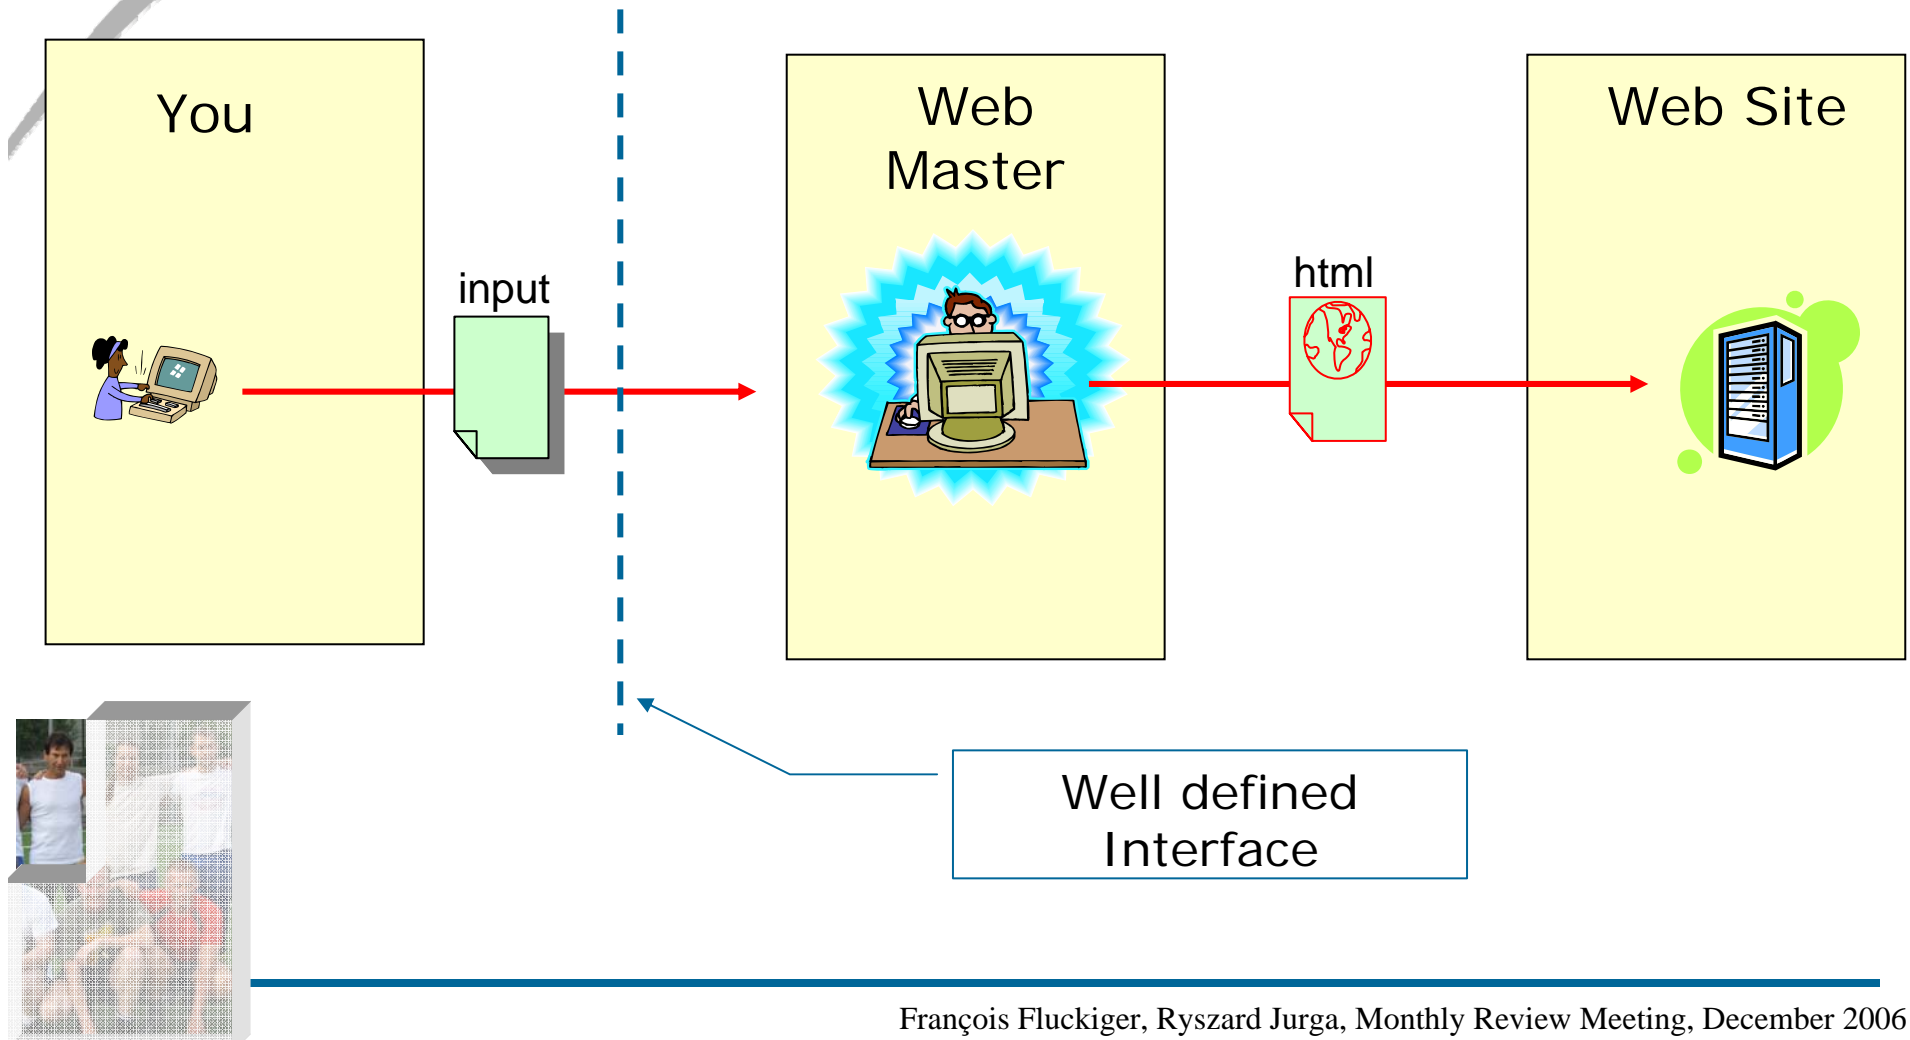

- Facilitate Enrichment of **Technical Content**
  - Create missing description of “Projects”/“Activities”
  - Update/enrich existing descriptions more systematically

## Process: Initial and Long term

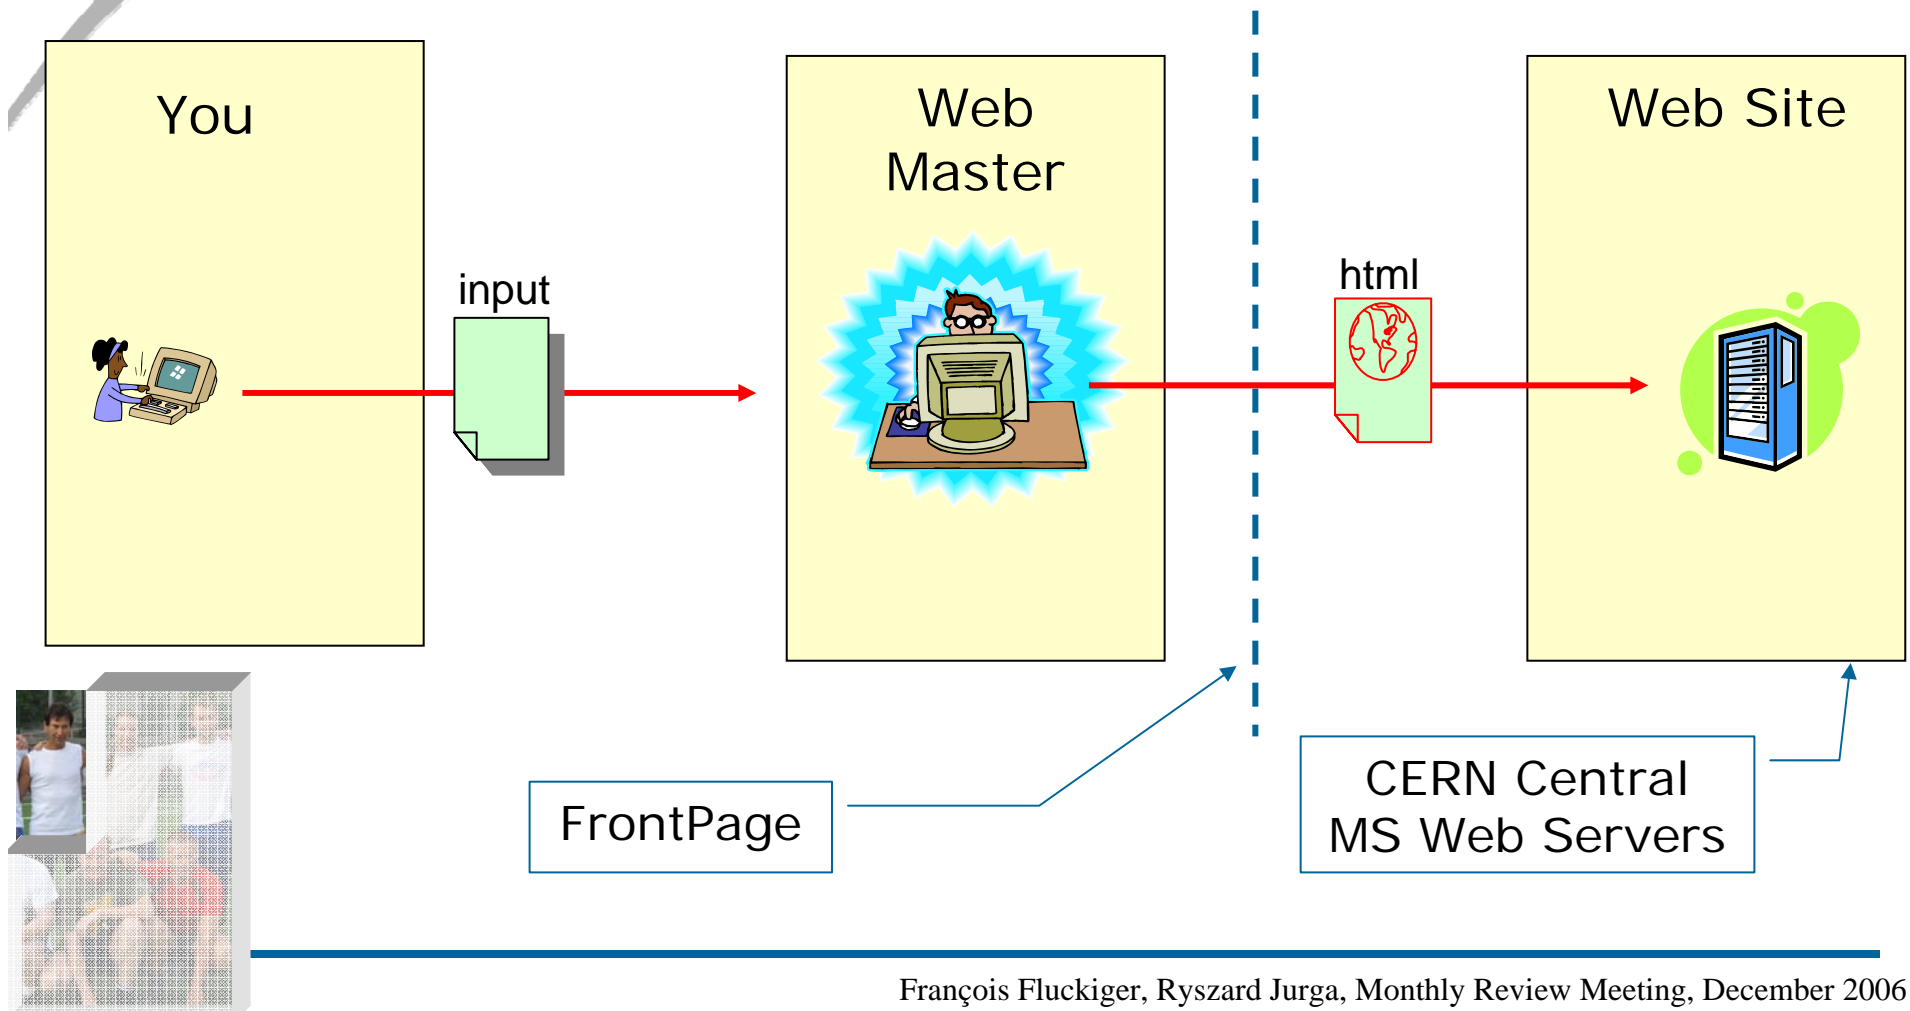

- Initial Process (January 2007)
  - Formalization of current process
- Longer term (no date, needs further discussion)
  - More elegant if achievable
  - Requires new tools

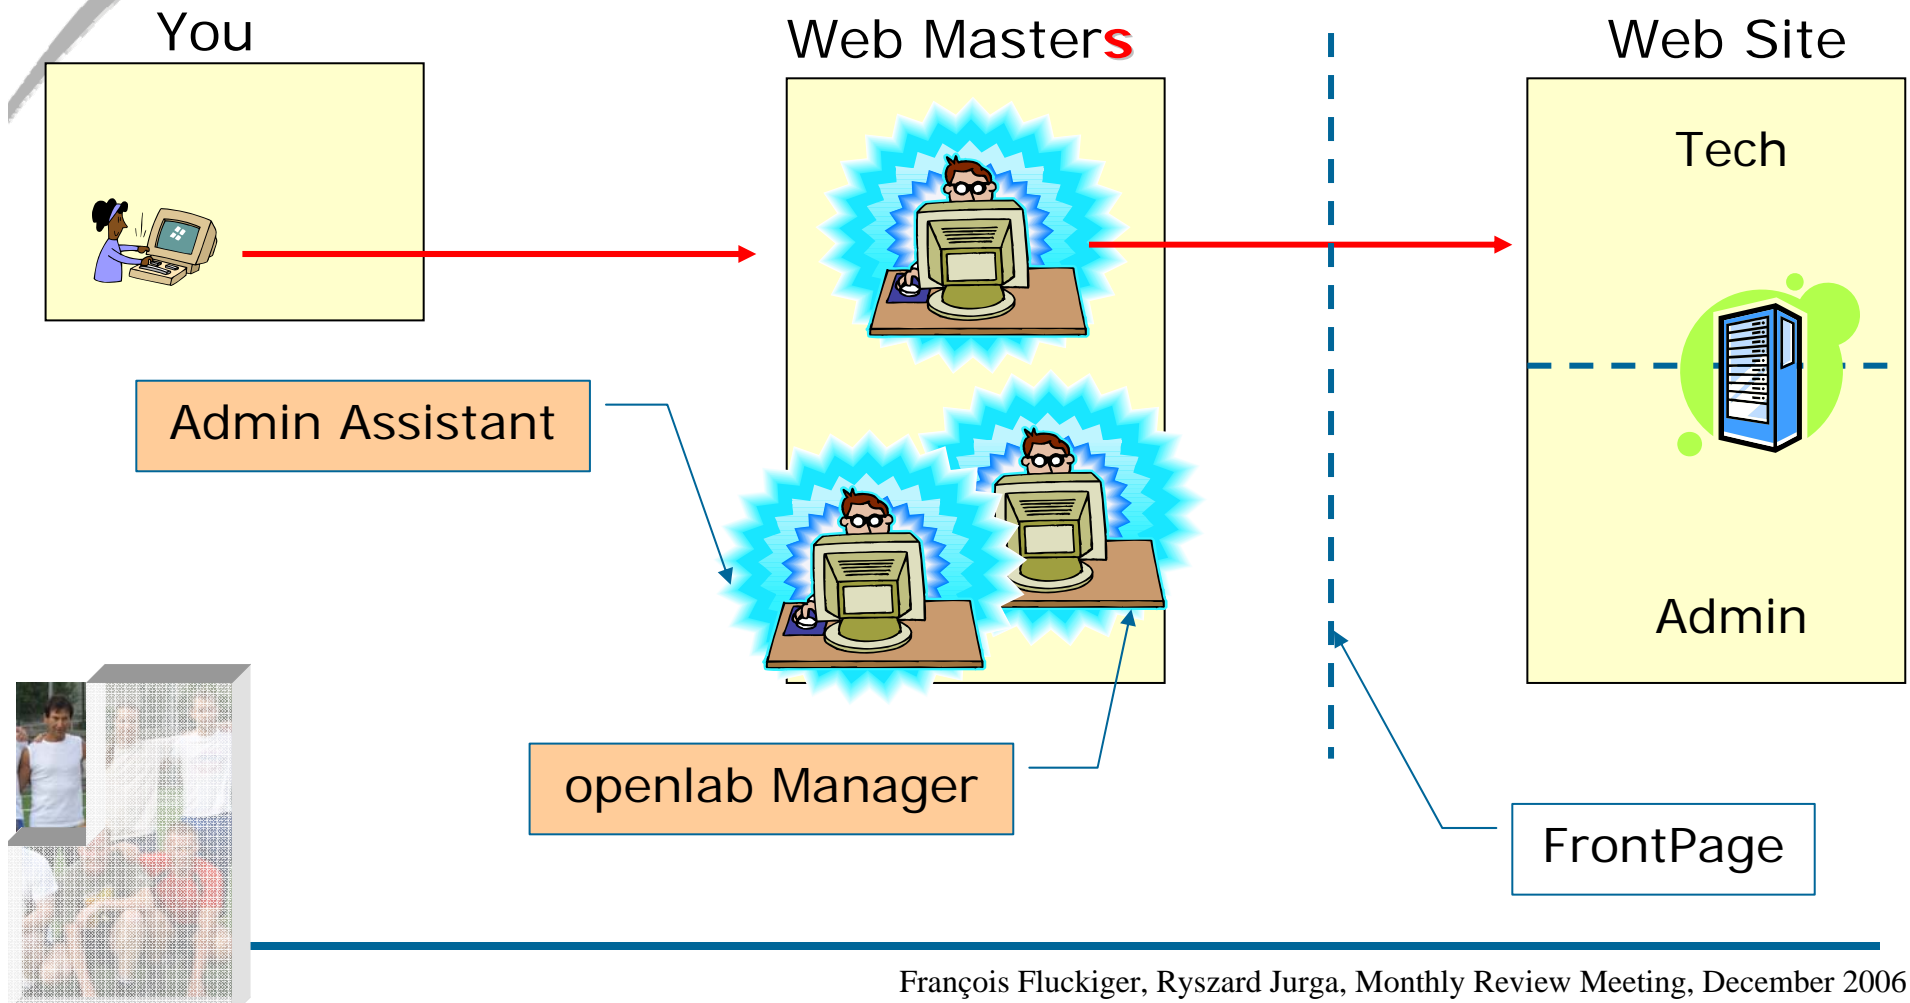

## Web Master Creates Web Pages

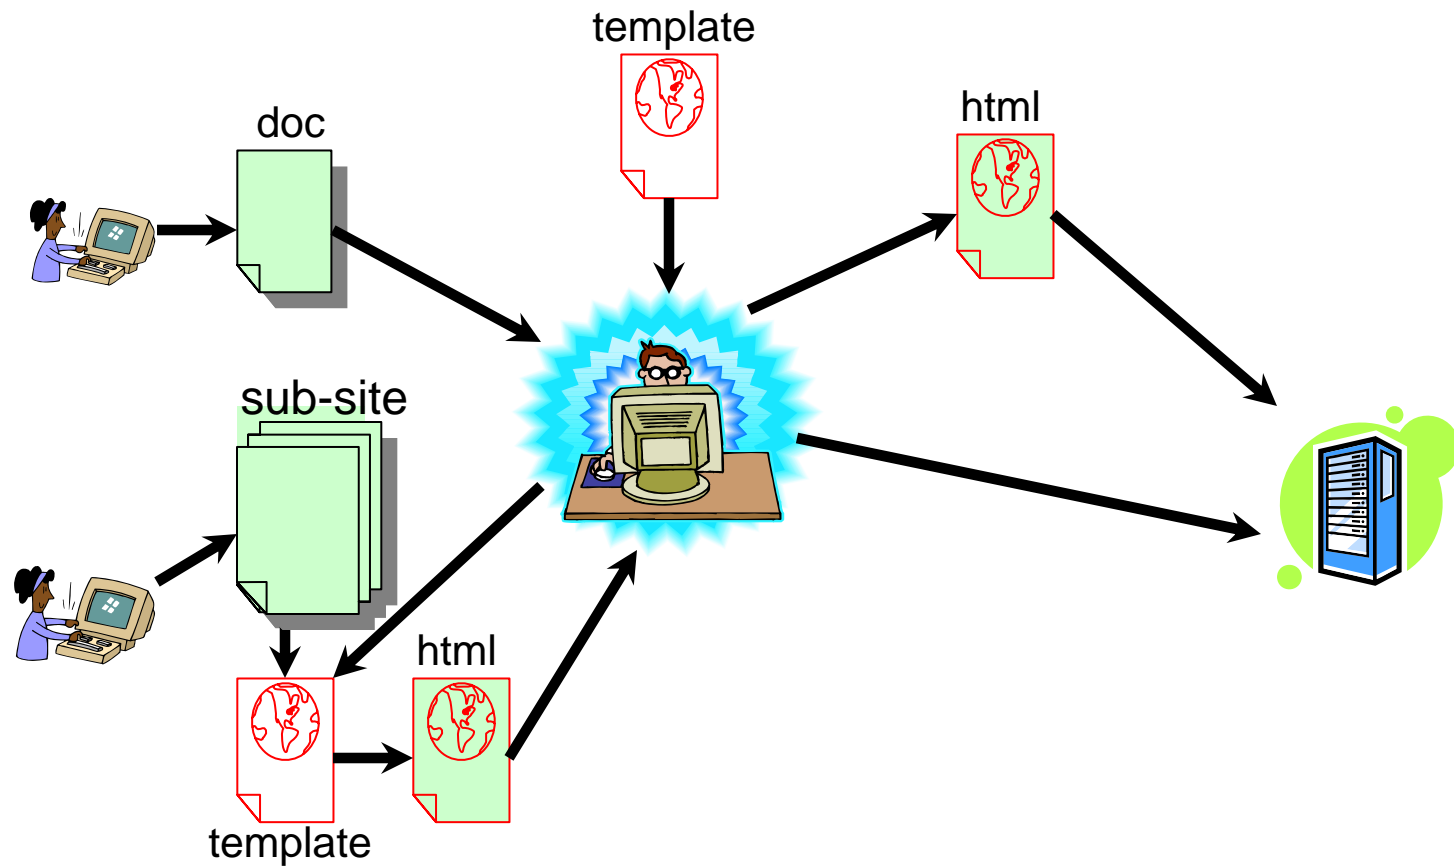

## Web Master Creates Web Pages

## Web Masters Creates Web Pages

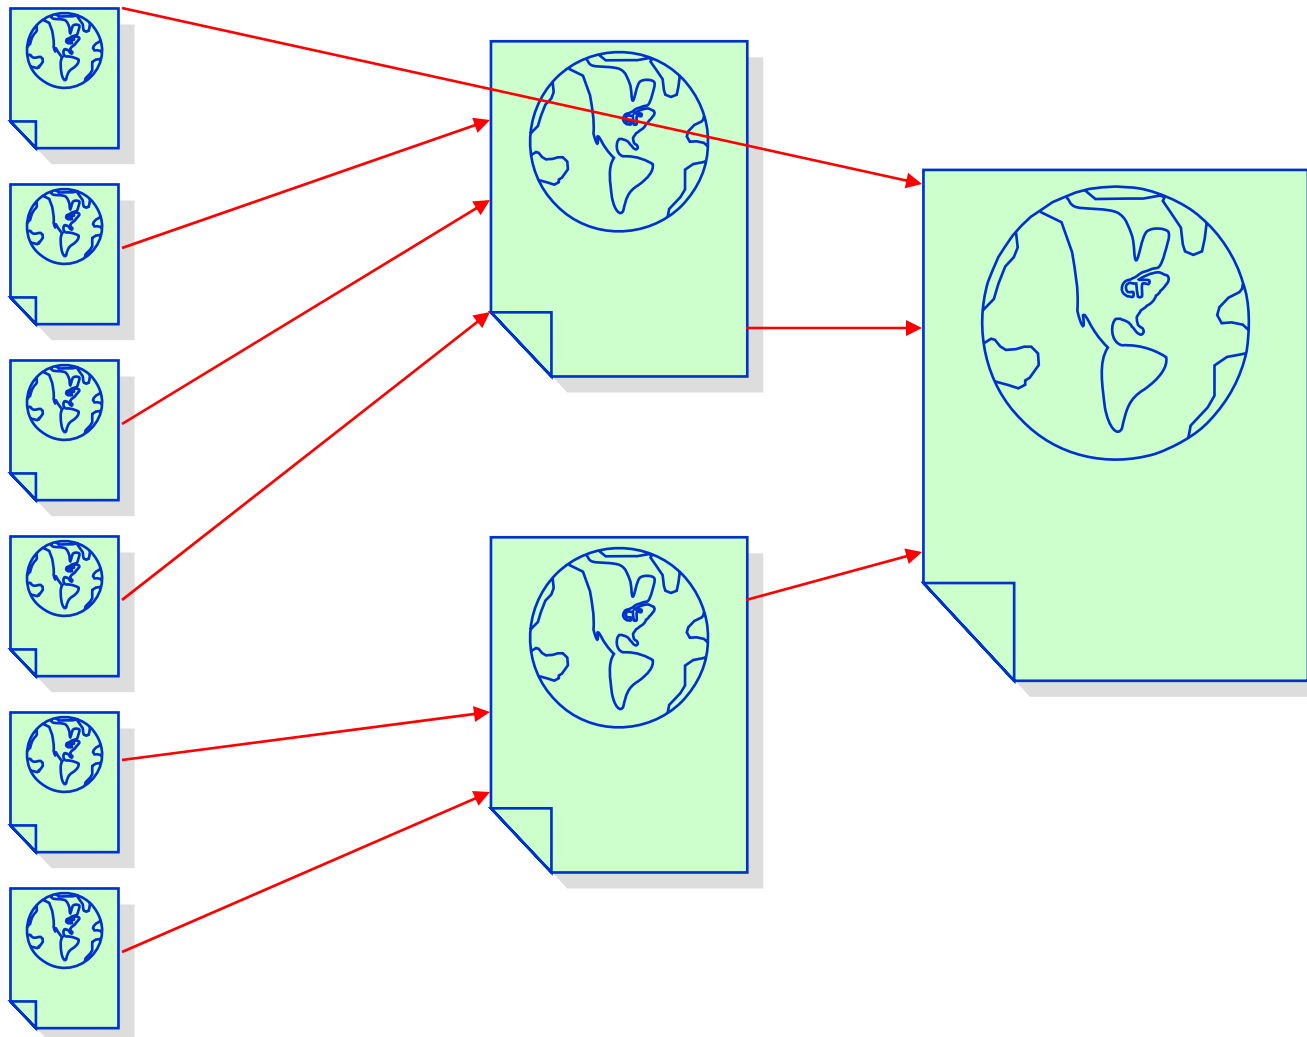

# The content of pages – data flow

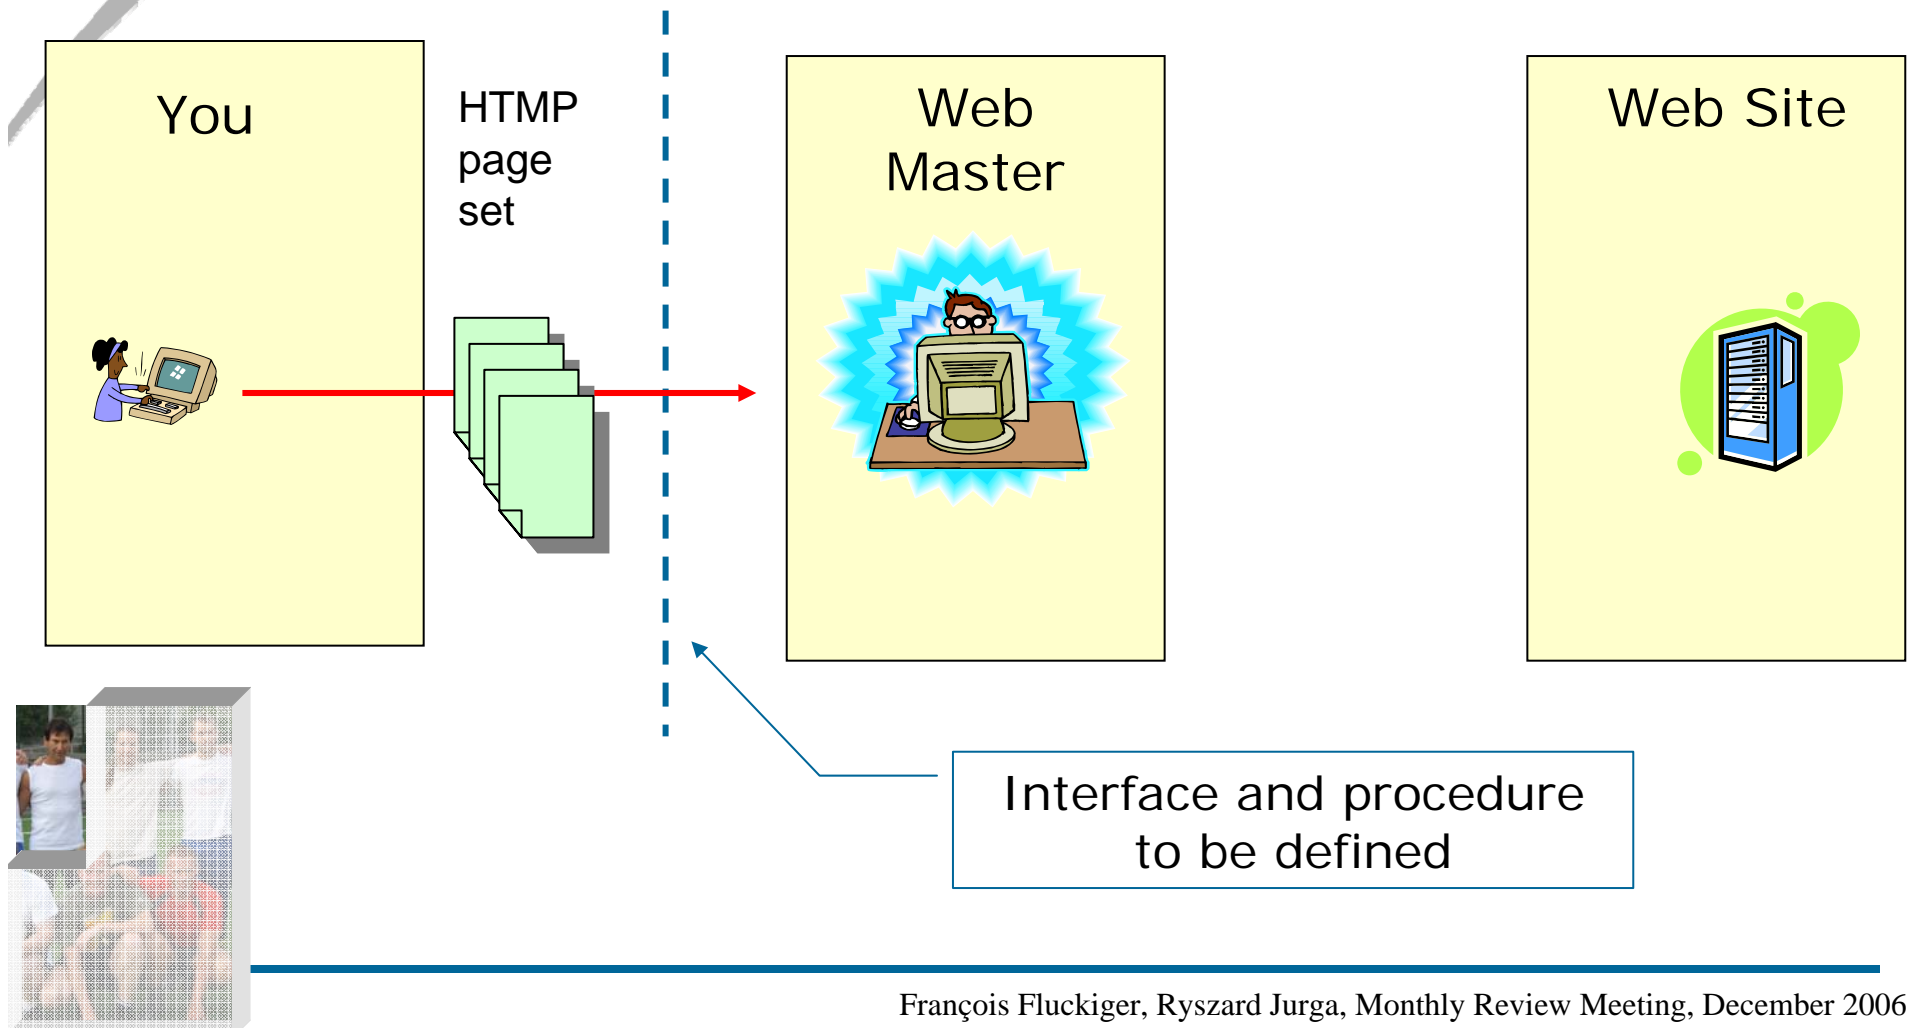

- format control
  - syntax, styles
- creation/maintenance of the folder structure
- follow page naming conventions
- creation of the links
  - within pages (external)
  - between pages, main site and “sub-sites” (internal)
- creation/maintenance of the navigation
  - top navigation/sub-site navigation
  - menu/submenus

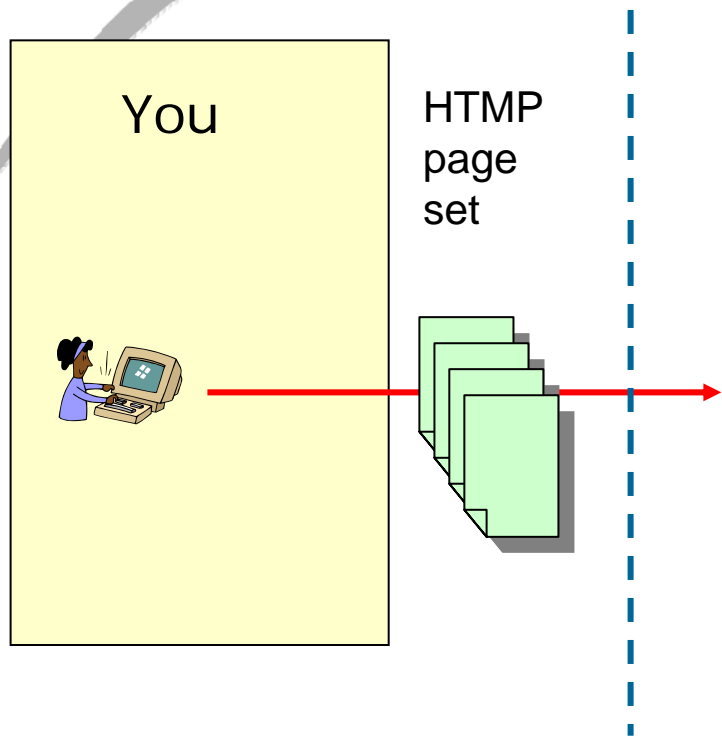

## Web Master receives Complete html Page Sets

# Process – Longer term: Issues

- How authors
  - develop
  - updatetheir “page sets” (“sub-sites”)
- Probably requires a **Web Editor** for local creation update
  - (e.g. to maintain links in the sub-site)
- Requires authors to follow conventions for folder structure and folder naming, ...
- How to manage versions?
- Requires a “**Collaborative Web Editing Tool**”
  - In the same way we have CVS as “Collaborative Software Development Tool”

## openlab 2 Technical Pages updates

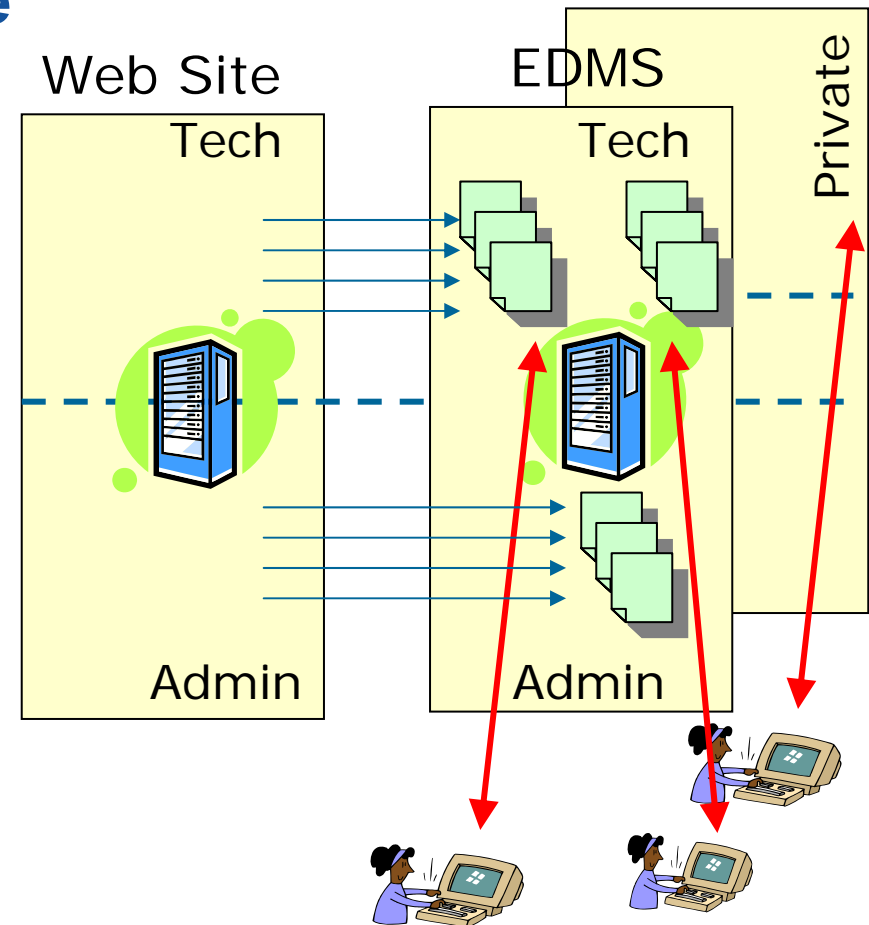

- optimization project in Platform Competence Center
  - Benchmarking
  - Performance Monitoring
  - Thermal Testing
  - IO Testing
  - Compiler Project
- openlab servers – new usage page
  - public and internal web page
- openlab presentations
  - more documents are available
  - split into different years
- 64-bit porting web page is coming soon (openlab I)

# To be furthered in future discussions

## EDMS and Web site

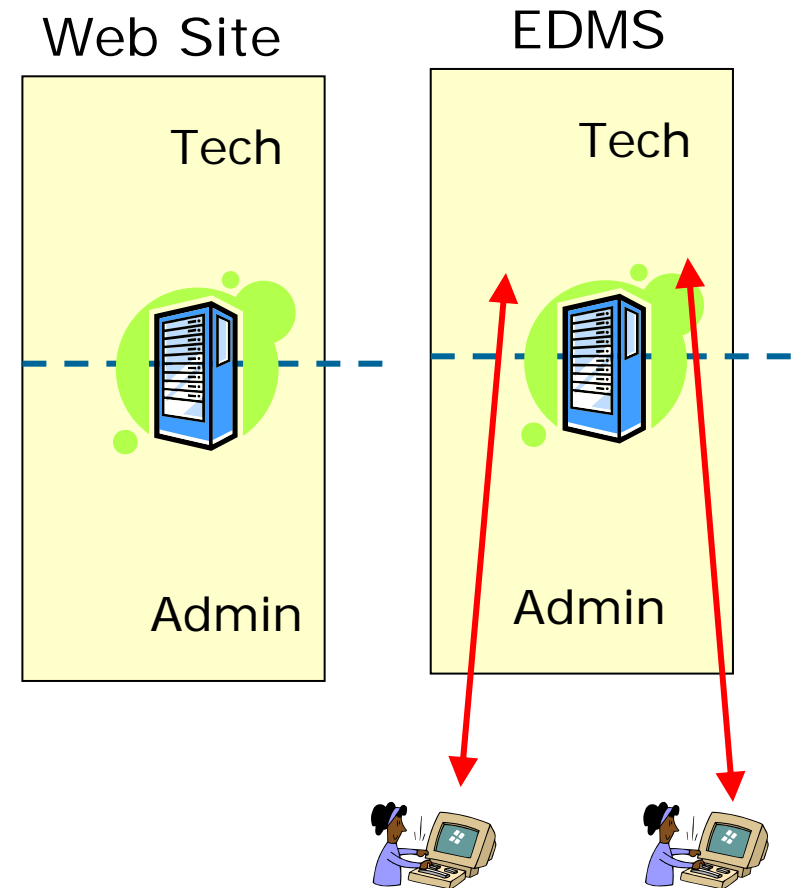

- **EDMS** to be used to **store public and private** documentation
  - Technical
  - Administrative
- **Web-site** to act as a **portal**
  - Pointing to public part of the EDMS structure
  - Not for storing documents
- You all have access rights  
(Severine maintains the access rights)

To be furthered in future discussions

## Collecting updates more systematically

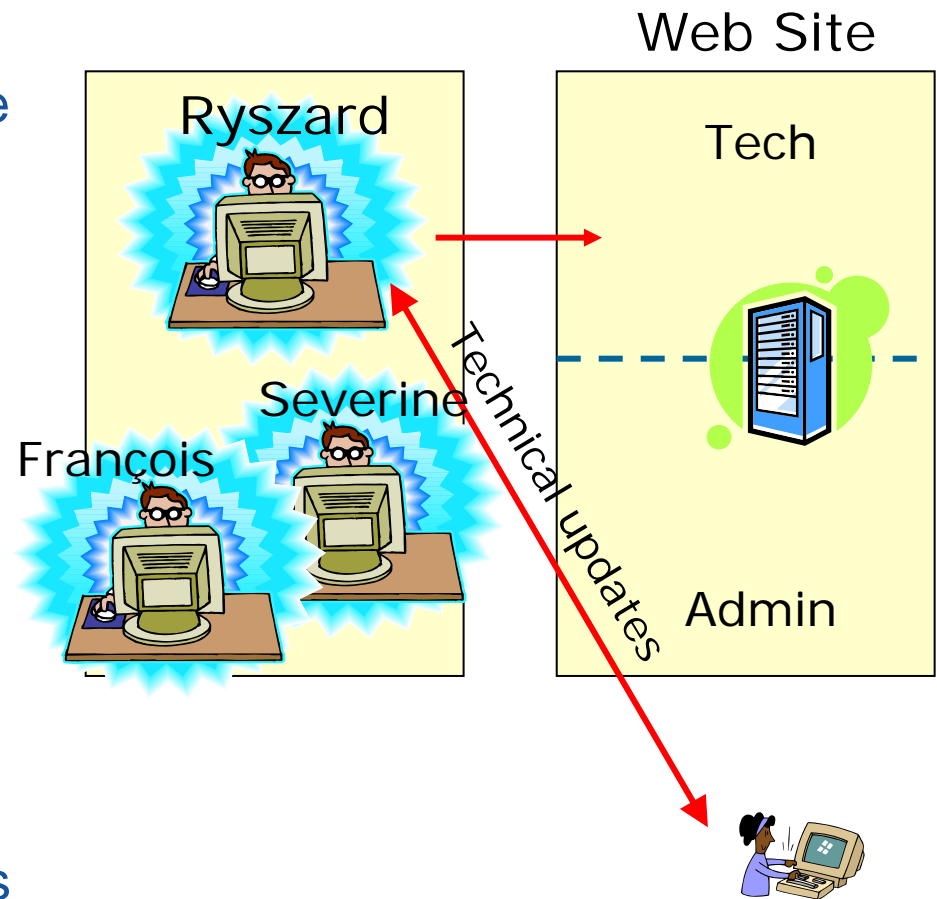

- Articles
- Publications
- Dissemination Material
  - e.g. posters, ...

To be furthered in future discussions

## “News” relabeled / categorized

- **Technical** updates
  - Outcome / Key points from these Monthly meetings
- **Management** updates e.g.
  - New partner joining
  - Guiding Principles update
- **Administrative** updates
  - Mainly for internal use
  - E.g. welcome to new members
- **Breaking News**
  - A selection of prominent updates

Time to move to Team Building
