Cisco and CERN Team Up For Next Generation Research

Science (<http://www.theweeklyobserver.com/news/science/>) Jun 9, 2015

0

(<http://www.theweeklyobserver.com/wp-content/uploads/2015/06/CE0085M.jpg>)

Cisco, a worldwide leader in IT innovations, has joined hands with CERN's industry outreach program, CERN openlab, to work collaboratively.

This union aims to develop state of the art, secure computer technologies, equipped to cope with larger and ever-growing quantities of data, with a view to providing new hardware and software capabilities for the big data age.

New concepts in the latest developments of hardware, system designs, network functionality, and ground breaking ideas and approaches for this new generation of computing are some of the matters that were mandated to the team of experts assigned by these two IT giants.

CERN's physicists and specialist engineers lay the groundwork in researching the fabric of the universe in which we live. The most famous research program of CERN, called the Large Hadron Collider (LHC), aims to collect and analyze data from across millions of different data points, providing invaluable insights for physicists.

When asked about the collaboration, Alberto Di Meglio, a spokesperson for CERN openlab said that, *"The success of the LHC depends critically on advances in information processing technologies and components. Advanced technologies are needed to operate scientific instruments, such as the accelerator and the detectors, safely and efficiently in an open environment."*

"We need technologies that are at the forefront of today's practices and, in many cases, several years ahead of general industry usage. Therefore, we are partnering with industry leading companies and are pleased to welcome Cisco into CERN openlab." Meglio added.

Vice President for Corporate Technology Group of Cisco, Maciej Kranz, is excited with their involvement with CERN Openlab and the endless possibilities for innovation from people and technologies.

"Managing and analyzing large amounts of data are challenges many organizations are facing, including CERN. As the public and private sector evolve to a digital platform, open innovation and collaboration across industry leaders, research institutes, universities, and start-ups will be vital to the success of the global economy," Kranz emphasized.
