Intel congratulates the European Organization for Nuclear Research (CERN) on the progress on the Higgs Boson particle; as scientists claim that this research is a gateway to a new era to see humanity unlock some of the universe's great mysteries, including dark matter and light-speed travel. CERN openlab is also an important partner of the Intel Labs Europe Network.

"The CERN team, which unites some of the most authoritative thinkers and physicists worldwide, always impresses us with its research," said Christian Morales Intel Vice President and General Manager, Europe, Middle East and Africa. He added, "Intel is proud to be a technology partner with leading edge products and technologies to support the research around Higgs boson and look forward to working with CERN on unlocking even more mysteries of the universe."

Stephen Pawlowski, Intel senior fellow, chief technology officer, Datacenter and Connected System Group and GM Intel Architecture Group said, "We are proud to be a member of CERN openlab, which is an important partner of the Intel Labs Europe Network, and this collaboration strengthens Intel's commitment to European R&D".
