Computing Engineer (Storage Developer / Engineer) Job in Geneva, Switzerland

At CERN, the European Organization for Nuclear Research, physicists and engineers are probing the fundamental structure of the universe. They use the world's largest and most complex scientific instruments to study the basic constituents of matter, the fundamental particles. The particles are made to collide together at close to the speed of light. The process gives the physicists clues about how the particles interact, and provides insights into the fundamental laws of nature.

Computing Engineer (Storage Developer / Engineer) Job Description

The Storage Group (ST) within CERN's IT Department ensures a coherent development and operation of storage services at CERN for all aspects of physics data. A key responsibility of the Group is the development of data storage and data management solutions, which are mission critical for the LHC program but also most other science activities at CERN and the word-wide LHC grid.

The EOS storage system developed by the group serves today more 80 PB of data to the community of analyzing scientists from most CERN experiment. The system increasingly also takes over additional task such as serving as a backend for cloud storage and providing home directories to CERN users.

The successful candidate will join the Analysis and Design (AD) section of ST group that develops storage and data management solutions for use at CERN and in the LHC computing grid and participates actively in the XROOT project.

Functions
As a member of the IT Storage Group, the successful candidate will:

- Participate in the design, development, maintenance and optimization of the various data and storage management products of the group.
- Contribute actively the product documentation and testing infrastructure maintained by the development team.
- Contribute actively to in service design discussions with software deployment teams in ST group and teams at collaborating sites deploying the groups data management solutions.
- Participate actively in strategic development collaborations of the group such as the XROOT project and the development collaboration as part of openlab projects.
- Interact with end-users as part of the level-4 support provided by the ST development team.

Qualification required
Master's degree or PhD or equivalent relevant experience, in the field of Information Technologies or a related field.

The candidate should have knowledge and practical experience in the following areas:

- Excellent object-oriented design, development skills in C/C++.
- Excellent understanding of system level disk and network I/O and multi-threading concepts.
- Practical understanding of the Linux operating system administration.
- Practical experience and in depth skills in UNIX shell script, Perl or Python programming.

In addition, knowledge of one or more of the following areas would be an asset, but are not mandatory:

- Large disk storage systems and/or global filesystems (GPFS, HDFS, AFS).
- Distributed content delivery systems.
- Experience with development of stable multi-threaded services.
- Experience with FUSE as file system integration technology.

Computing Engineer (Storage Developer / Engineer) Job Requirements

The technical competencies required for this post are:

- Programming/Software development: solid knowledge of the linux operating system environment; design, creation, testing using C++, C and Python.
- Application support: application maintenance and support services investigating and resolving issues and providing information about the systems.
- User relationship management: ability to liaise effectively with both users and other teams providing it services; systems integration/installation/decommissioning.
- Change management: configuration management, release management.

The language competencies required are:

- Spoken and written English: ability to draw-up technical specifications documentation and/or scientific reports. Basic knowledge of French or an undertaking to acquire it rapidly.

Eligibility conditions
Employing a diverse and international workforce is a CERN core value and central to our success. We welcome applications from all Member States irrespective of

gender, age, disability, sexual orientation, race, religion or personal situation.

This vacancy will be filled as soon as possible, and applications should normally reach us no later than **30.11.2016.**

By applying here, you allow CERN to consider your application for any position it considers relevant with respect to your profile. Please ensure you update your profile regularly with any relevant information and that you inform the recruitment service if you wish your file to be removed from the database.

Note on Employment Conditions
We offer a limited-duration contract for a period of 5 years. Limited-duration contracts shall terminate by default on their date of expiry.
Subject to certain conditions, holders of limited-duration contracts may apply for an indefinite position.

These functions require:

- Stand-by duty, when required by the needs of the Organization.
- Work during nights, Sundays and official holidays, when required by the needs of the Organization.
