CERN Storage Systems for Large-scale Wireless ^[1]

Date published:

Sunday, 1 September, 2013

Document type:

Summer student report

Author(s):

A. Azzarà

The project aims at evaluating the use of CERN computing infrastructure for next generation sensor networks data analysis. The proposed system allows the simulation of a large-scale sensor array for traffic analysis, streaming data to CERN storage systems in an efficient way. The data are made available for offline and quasi-online analysis, enabling both long term planning and fast reaction on the environment.
