

# Information Discovery

Exploring Data-Driven Decision-Making for  
Improving the Control of CERN's Accelerator Complex

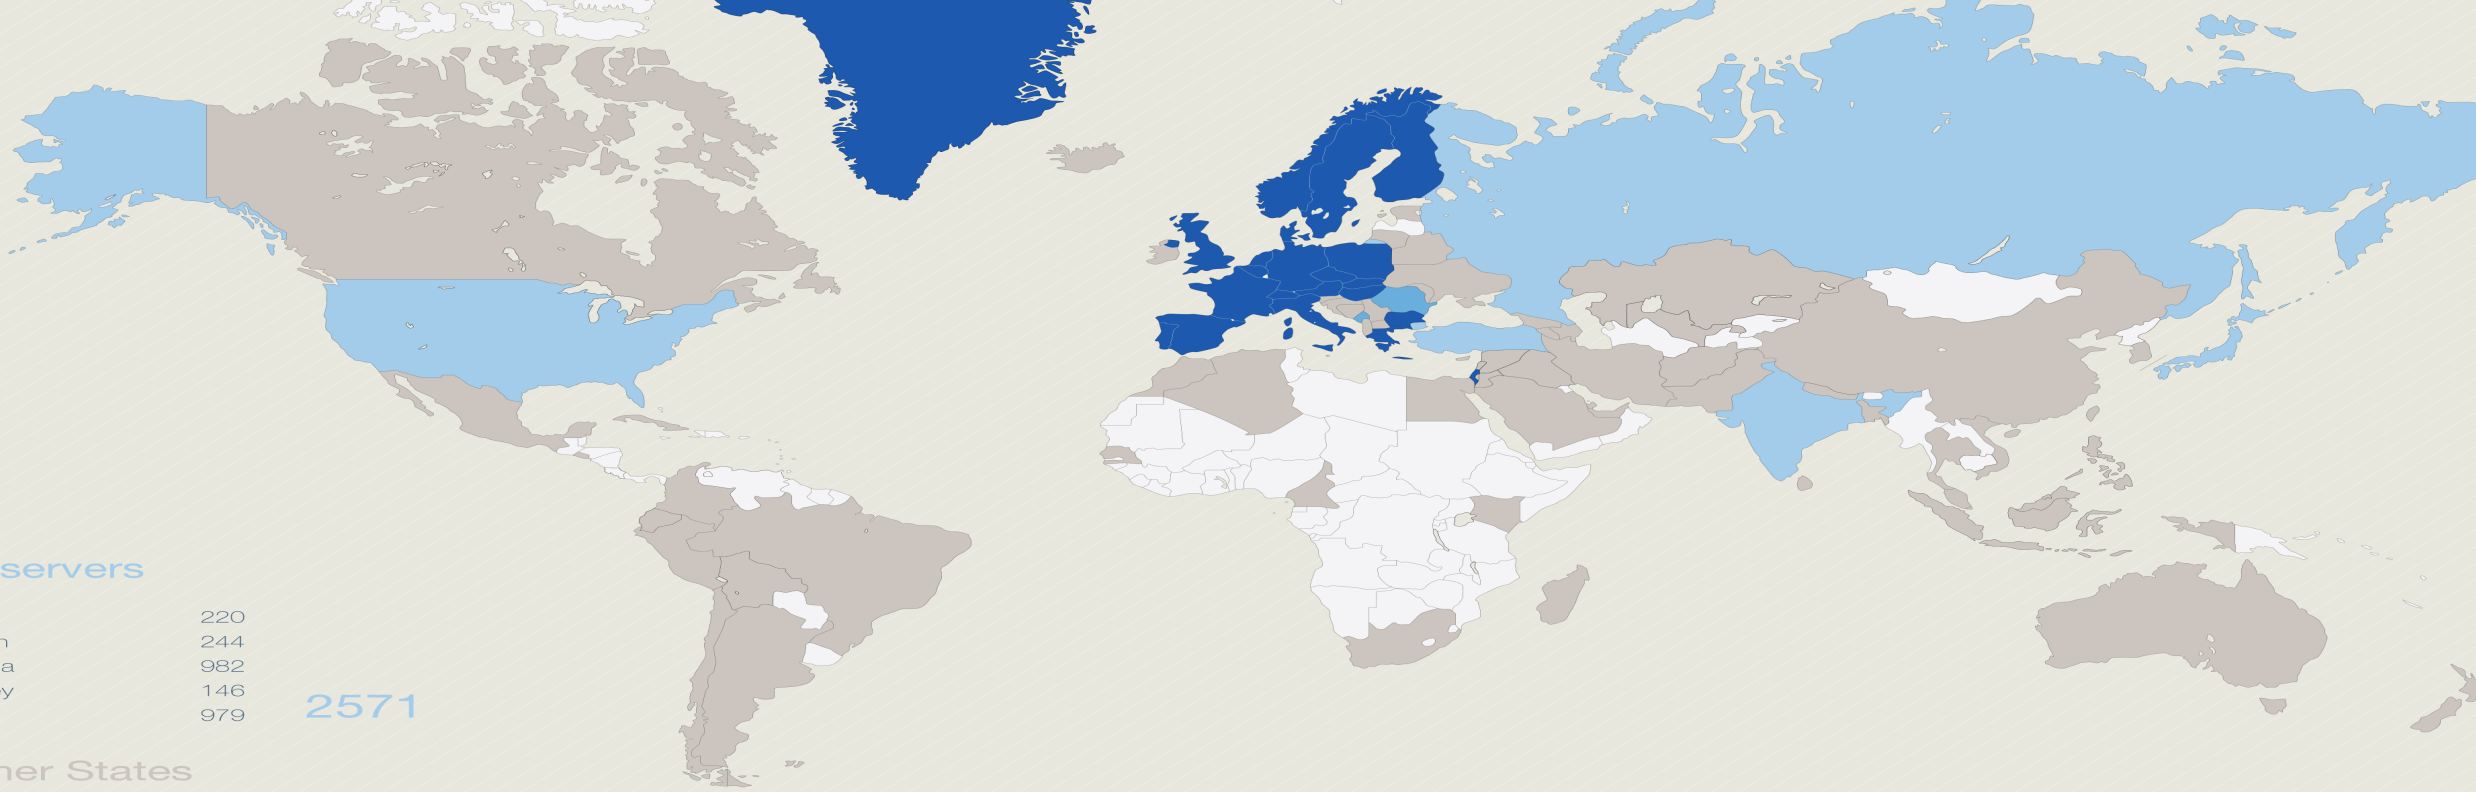

Antonio Romero Marín

# What is CERN

- CERN - European Laboratory for Particle Physics
- Founded in 1954 by 12 countries for fundamental physics research in a post-war Europe
  - “Science for Peace”

2571

# CERN Mission

## Discoveries

Seeking answers to questions about the Universe

## International Cooperation

Uniting bringing nations together through science

## Science & Education

Training tomorrow's scientists and engineers

## Science & Technology

Advancing the frontiers of technology

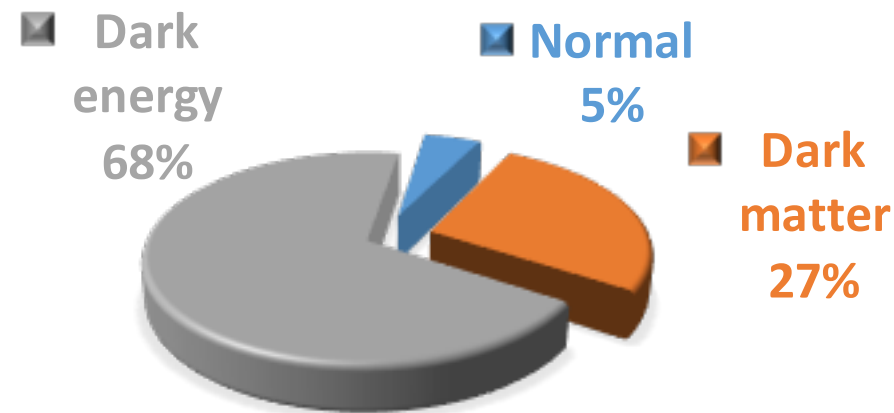

**What is the Universe made of?**

**How does it work?**

# Fundamental Research

- Why do particles have mass?
- What is dark matter and dark energy?

**Composition of the Universe**

- Why is there far more matter than antimatter in the universe?
  - Big Bang should have created equal amounts of matter and antimatter

# CERN Instruments

## Accelerators

Boost particles to high energies and speed to collide

## Detectors

Observe and record the results of these collisions

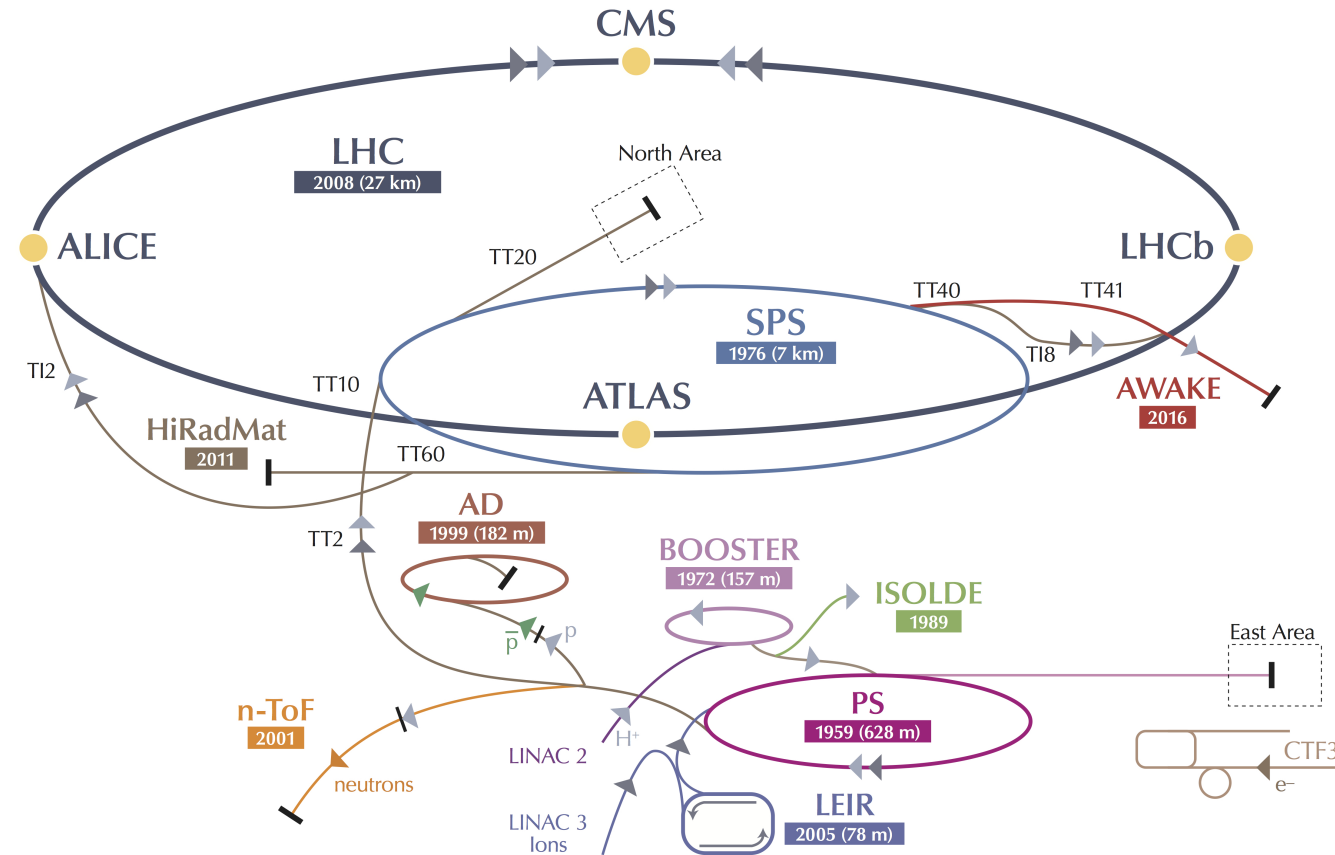

# The Large Hadron Collider (LHC)

- **Largest machine** in the world
  - 27km, 6000+ superconducting magnets
- **600 million** collisions per second
  - Generating approximately one petabyte of data per second
- One of the **coldest places** on Earth
  - Main magnets operate at a temperature of 1.9 K (-271.3°C)
- **Hottest spot** in the galaxy
  - During Lead ion collisions create temperatures 100000x hotter than the heart of the sun

# The CERN Accelerator Complex

▶ p (proton)    ▶ ion    ▶ neutrons    ▶  $\bar{p}$  (antiproton)    ▶ electron    ▶  $\leftrightarrow$  proton/antiproton conversion

LHC Large Hadron Collider    SPS Super Proton Synchrotron    PS Proton Synchrotron

AD Antiproton Decelerator    CTF3 Clic Test Facility    AWAKE Advanced WAKEfield Experiment    ISOLDE Isotope Separator OnLine DEvice

LEIR Low Energy Ion Ring    LINAC LINear ACcelerator    n-ToF Neutrons Time Of Flight    HiRadMat High-Radiation to Materials

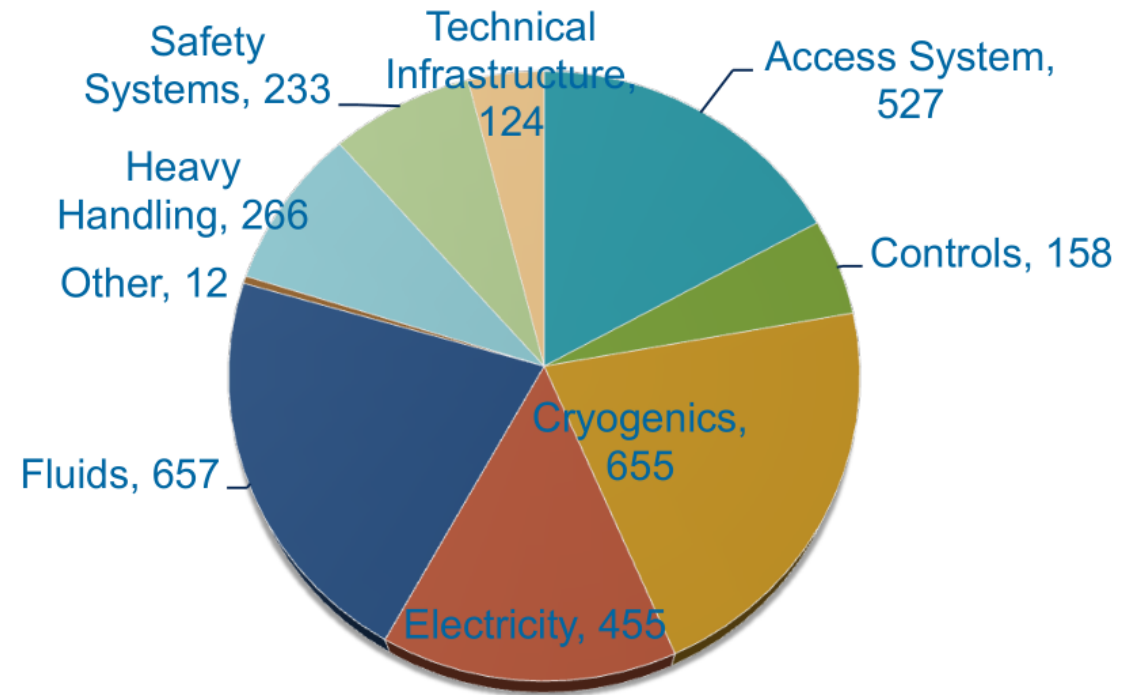

# CERN is an extreme data environment

- Control and operations
  - Millions of sensors, signals
  - Large number of control devices
  - Equipment
- Monitoring and logging
- Supporting IT infrastructure
  - Databases
  - Network
  - Services
- CERN has great monitoring and logging systems
  - Large amount of data has been stored over years

# Data Analytics Challenges

- Some faults cannot be avoid
- Decrease the availability for running physics
- Corrective interventions needed

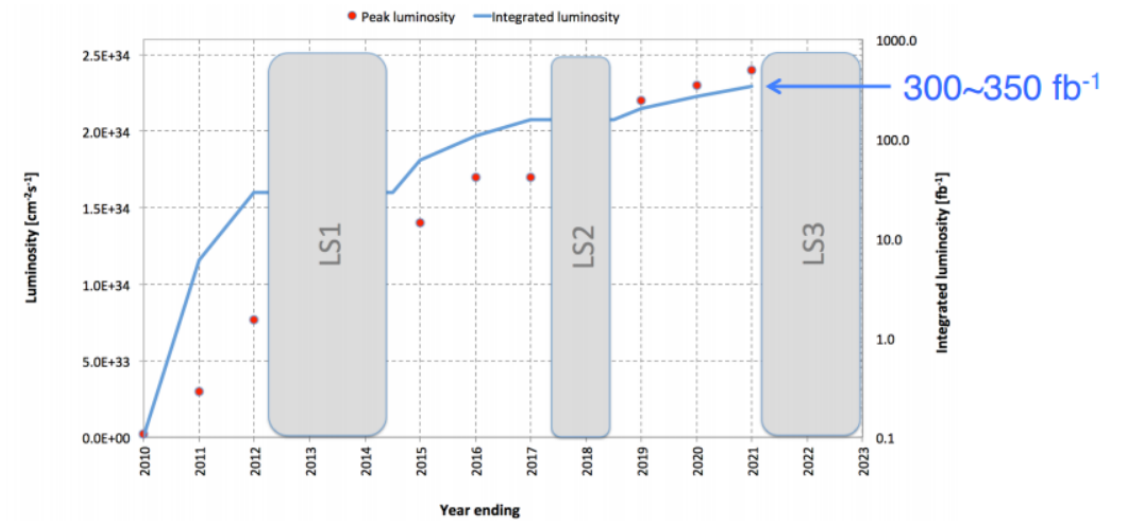

# A look into the Future

- LHC upgrades will further increase luminosity
  - Computing resources needs will be higher
  - Data generated will increase drastically

Table 17: HLT Rate Evolution

Hz	ALICE	ATLAS	CMS	LHCb
2012	400 Hz 330 MB/s (p-p) 540 MB/s (p-Pb)	550 Hz 440 MB/s	460+360 Hz 328 MB/S	5000 Hz 300 MB/s
2015	500 Hz 525 MB/s (p-p) 810 MB/s (p-Pb) 3750 MB/s (Pb-Pb)	1000 Hz 800-1000 MB/s	1000 Hz 600 MB/S	10000 Hz 750 MB/s

- Next accelerators
  - Future Circular Collider (80-100 km)

# openlab Data Analytics Project

- **Optimize our systems**
  - Reducing and predicting faults and corrective interventions
  - Increase the availability and operations efficiency
- **Profit from CERN data investment by using data analytics**
  - Extract knowledge
  - Discover useful information
  - Suggest conclusions
  - Support decision making
- **Control and Monitoring Systems**
  - Proactive
  - Predictive
  - Intelligent

# CERN openlab

- Public-private partnership between CERN and leading ICT companies
- Accelerate cutting-edge solutions to be used by the worldwide LHC community
- Designed to create and disseminate knowledge
  - Publication of reports and articles
  - Workshops or seminars
  - CERN openlab Student Programme

**CERN** openlab

**Partners**

**ORACLE**

**SIEMENS**

**Contributors**

**Associates**

**Yandex**

# Areas of investigation

- Data extraction, transformation and loading (ETL)
- Predictive maintenance & Anomaly Detection
- System Optimization
- Data Visualization and Discovery

# Data Discovery

- Interactive and visual analytics
  - Get **new insights** from data
- Intended to be used by the end users
  - Enabling them to use their intuition and knowledge of the data
- Powerful customization of dashboards and visualizations
  - Without intervention of IT
- Integrate multiple data sources
  - Analyze information of any type and any source

# Oracle Big Data Discovery

- Scale-out architecture
  - Integration with Hadoop ecosystem
- Flexible and user-friendly interface
  - Powerful and dynamic visualizations
- Advanced Analytics
  - Text analytics
  - Correlation
- User-driven ETL
- Collaborative environment

# PoC – FCC RAMS studies

- Reliability, Availability, Maintainability and Safety (RAMS) studies for the Future Circular Collider (FCC)
- Increase the reliability and availability of the LHC
- Use RAMS findings to assess the feasibility and needs of FCC
- Data distributed across multiple sources
  - Operations e-logbook
  - Accelerator Fault Tracking project
  - Accelerator logging
  - Power Converters, cryogenics, more...

# Conclusions

- Data visualization and discovery is an important area in data analytics
  - Facilitates users to visualize and explore their data
  - Find correlations, extract insight and useful information
- Important points
  - Flexible and user-friendly platform
  - Advanced data visualization and exploration
  - Collaborative
- Application to different domains
  - Controls and Operations
    - Accelerator Fault Tracking
    - Diagnostics and Monitoring
  - IT Infrastructure Monitoring
    - Server logs analysis
    - Database latency
  - Human Resources
