

Kerlabs : OS for an efficient cluster

Pascal Gallard
www.kerlabs.com

Kerrighed
Linux clusters made easy

What's Kerrighed ?

- Part of the HPC INRIA Rennes research project (PARIS project lead by T. Priol)
 - Research in OS for cluster started in 1999 (C. Morin)
- 3 PhDs, several engineers
- Industrial funds from EDF R&D, DGA.
 - > 20 years of engineer
- Part of the XtreamOS european project (www.xtreemos.org).

Kerrighed's goal

- How to provide an easy way to handle your cluster:
 - Replace your set of nodes by one unique machine
 - Keep your legacy application unmodified

Kerrighed's goal

- How to provide an easy way to handle your cluster:
 - Replace your set of nodes by one unique machine
 - Keep your legacy application unmodified

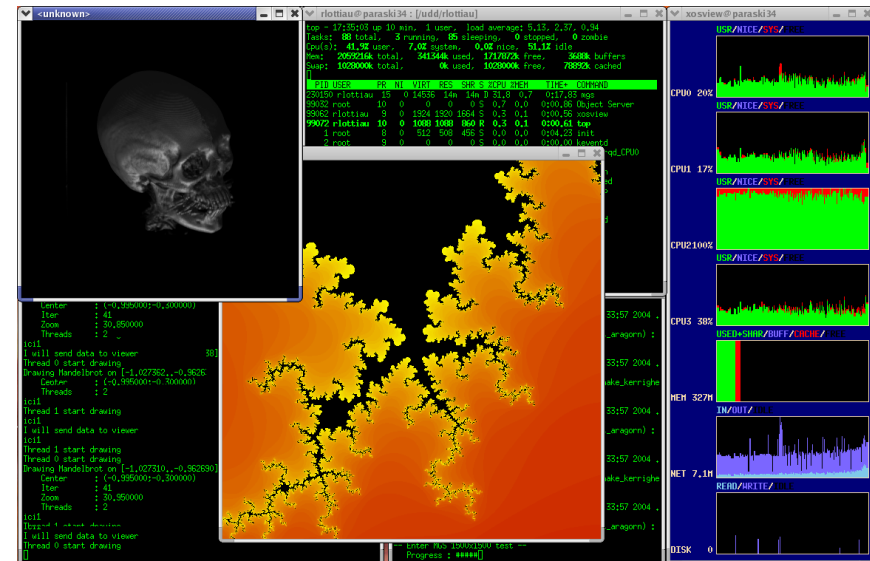

Kerrighed : OS for Linux cluster

- Virtual SMP over Clusters
 - Single process space
 - Single file space
 - Single memory space

- Customizable Global Process Scheduler

- Supports Parallel Programming

- Supports Process Checkpointing

Kerrighed in action

Kerrighed: current status

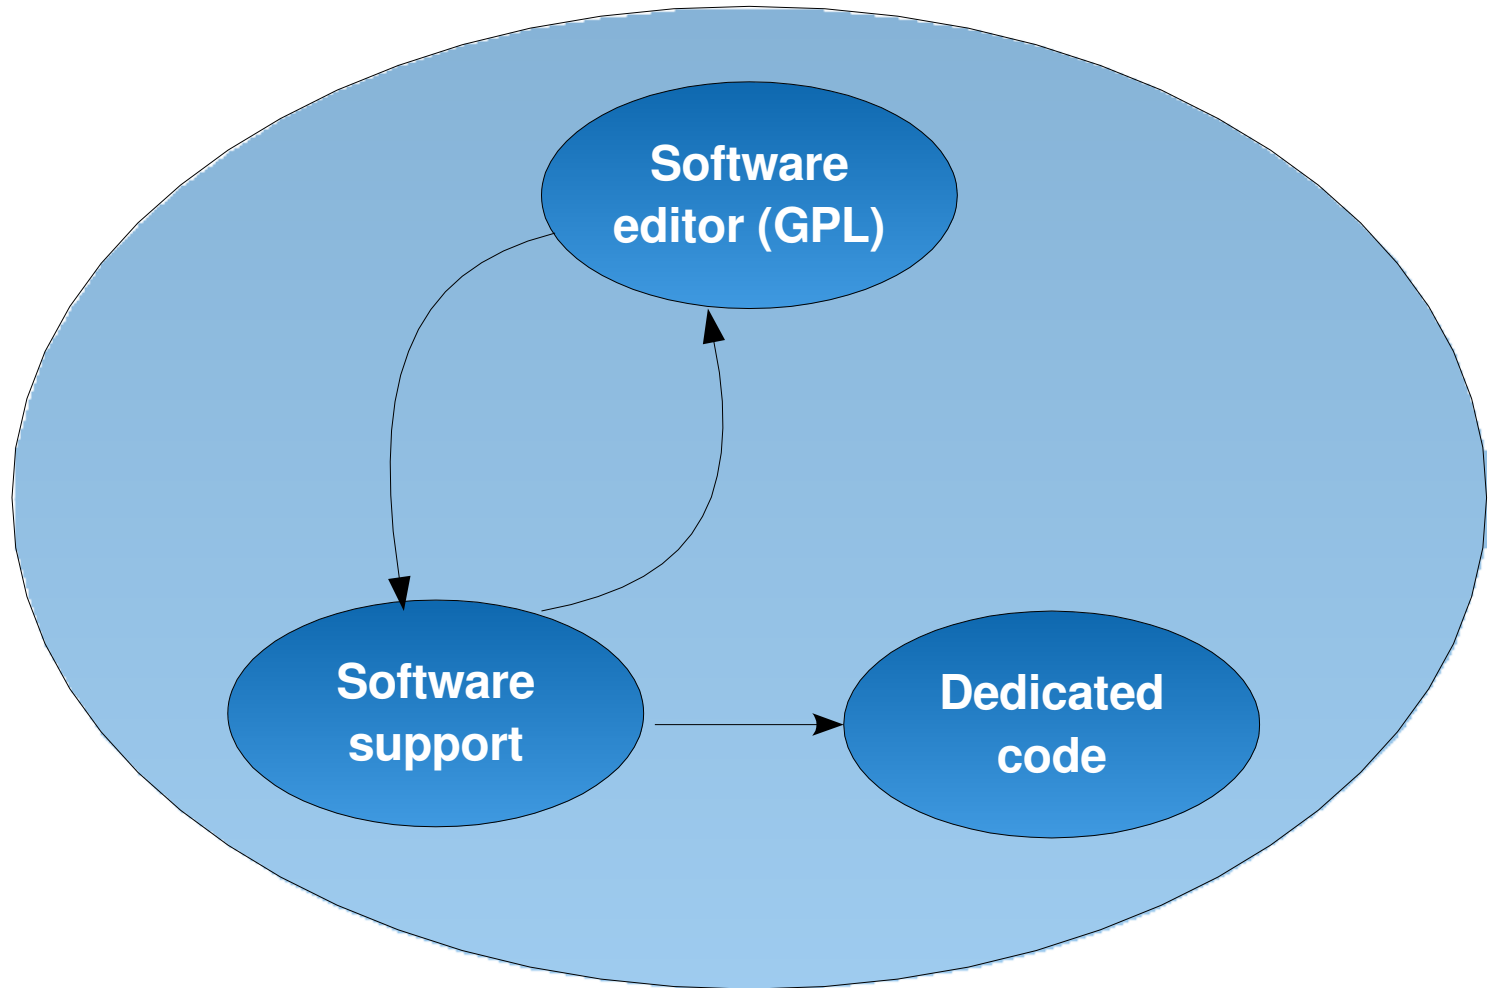

- Current version based on Linux Kernel 2.6.11
- Open source project under GPL licence
(www.kerrighed.org)
- Available as an official OSCAR package
(ssi-oscar.irisa.fr)
- Easy test with the Knoppix-based Kerrighed Live-CD

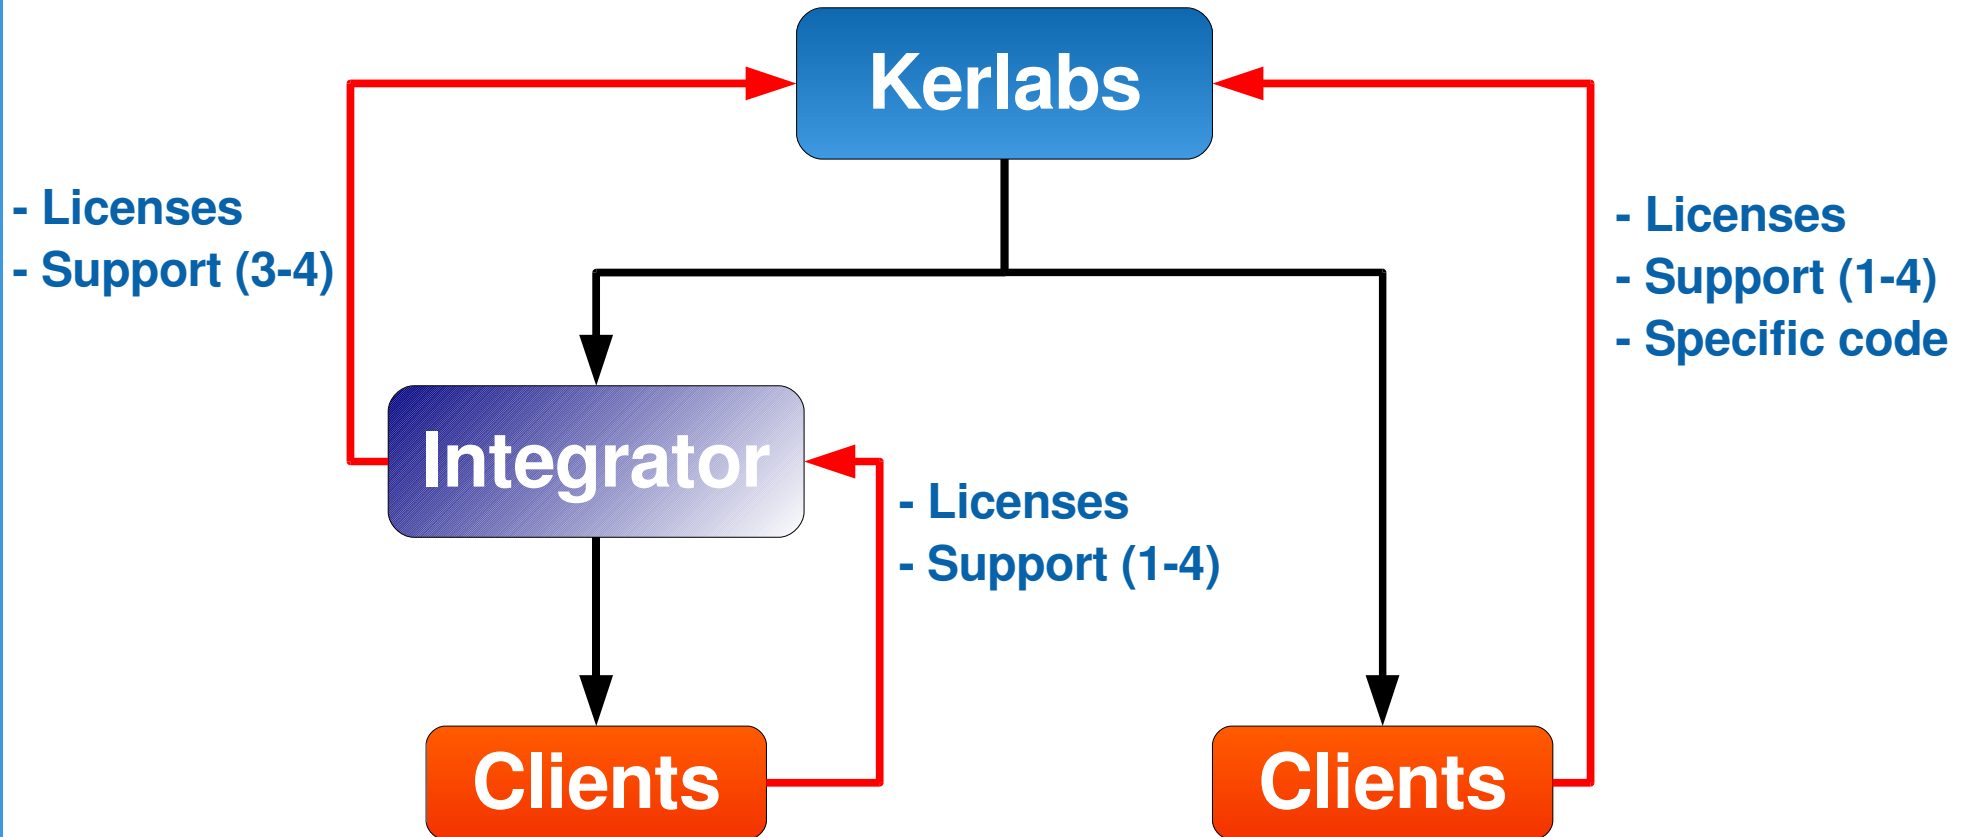

- Kerlabs is a software editor company

- Our activities:
 - to drive and to develop the core-GPL infrastructure
 - to stimulate the current community
 - to design and to sell proprietary modules
 - support to specific network technology...
 - to provide high-level support around cluster and Kerrighed

Kerlabs's activities

Economical stream

Why Kerlabs ?

- SuperComputing 2004: first full featured version
 - Very good feedback of industrial public
 - INRIA can't provide any commercial support to Kerrighed

- End of our contract in november 2005
 - start to receive job-proposal
 - The design team will be destroyed

- Why not to create our own company ?

- Because it's a GPL software!
- Because we are technical people!
- Because we don't have the very first euros needed to start a company !
 - We need offices, computers, business training...
- Because we are not in US...

One problem = One solution

- Problem with the GPL ?

- Learn from Adacore, Mysql Corp, Troll Tech, etc.

We have to sell our knowledge, not only the code

- Incomplete skills in our team ?

- Discuss with other startup in the lab

We need to add an enterprise manager to our team

- Need offices, machines, etc...

- Ask INRIA to help us

We need to get the status of « INRIA spinoff »

- Collaboration between
 - INRIA Rennes (1 dedicated project consultant)
 - Rennes Atalantes (Emergys: 2 dedicated project consultants)
 - Myself (as the leader of the company)

- INRIA allows us to use some of its resources (mainly offices, computers)
- Rennes Atalantes
 - provides fund for lawyers, marketing studies, etc.
 - organises meeting and training in order to develop our skills
- Kerlabs works on the developpement of Kerrighed

- No capital risk in France
- Only « development » capital
 - need a validated market
 - need a validated product
 - need some early-customers
- We need a validated project in order to start a company
- Thanks to INRIA to provide the validation

- We will be monitored 5 years by Rennes Atalantes
- Take benefit of INRIA-Transfert consulting services
 - mainly in order to have new industrial/academic contacts
- INRIA scientific collaboration
 - Creation of a « scientific board » in the company
 - T. Priol, C. Morin
 - continue the transfert to industrie of technologies around Kerrighed

- 4 co-founders
 - 3 persons from the Kerrighed teams
 - Pascal Gallard (Communication / HA designer)
 - Renaud Lottiaux (memory and filesystem designer)
 - Louis Rilling (worked on the global scheduling management)
 - 1 enterprise manager

- Expect to start our activity in september

Our products roadmap

- Release our first product for SuperComputing'06
 - Architecture to manage/supervise processes in a cluster
 - basic add/delete resources mechanisms in the cluster
 - Framework for HPC applications
- 2007
 - full HPC applications support
 - full dynamic resources management
 - Server (database and web) support
- 2008
 - Architecture for highly-available applications

- Every year, one or two new startups at INRIA Rennes
- This framework is quite efficient
- People in the spinoff-process are really committed to their job

- Looks like they were just waiting for us to decide...

- Increase of my skills in project management (in any cases, good for my CV)

Wellcome on our website
