3A_the_intersection_of_big_data_enterprise_and_hpc.html

Sverre Jarp, the Chief Technology Officer in the CERN openlab, has been working in computing at CERN for over 35 years and has held both managerial and technical positions promoting advanced but cost-effective computing solutions for the Laboratory. As the General Chair of the ISC Big Data'13 Conference, he is preparing what promises to be an interesting line-up. We caught up with him for a few questions about the space, and the conference.
