# TECH STOCKS TO LOOK OUT FOR: INTEGRATED DEVICE TECHNOLOGY, INC. (IDTI), FINISAR CORP. (FNSR)

 ALEN HOOK - JUNE 23, 2016

SHARE ON:    

Integrated Device Technology, Inc. (IDTI) ended last trading session with a change of -1.62 percent. It trades at an average volume of 2.56M shares versus 1.69M shares recorded at the end of last trading session. The share price of \$21.24 is at a distance of 46.48 percent from its 52-week low and down -26.86 percent versus its peak. The company has a market cap of \$2.9B and currently has 136.46M shares outstanding. The share price is currently -7.27 percent versus its SMA20, -1.09 percent versus its SMA50, and -5.4 percent versus its SMA200. The stock has a weekly performance of -6.02 percent and is -19.39 percent year-to-date as of the recent close.

On June 22, 2016 **Integrated Device Technology, Inc. (IDTI)** announced that CERN's data-processing framework has successfully been ported to a RapidIO®-enabled low-latency network that features multiple x86 CPU nodes, a world first in the high-performance computing market. The development comes during the first phase of IDT's collaboration with CERN (the European Organization for Nuclear

Research), part of a multi-year project announced last year that is designed to speed and improve data analytics at CERN's Large Hadron Collider (LHC) and data center.

During this groundbreaking work, standard x86 servers in the CERN data center were equipped with 20 Gbps RapidIO network interface controller (NIC) cards and connected with a 0.75 Tbps RapidIO top of rack switch appliance designed by Prodrive Technologies. Leveraging this hardware architecture, CERN openlab researchers successfully ported CERN's ROOT framework for data processing and analytics, as well as the LHCb experiment's DAQPIPE event-building emulator, which is used to evaluate high-tech interconnects intended to be used in the collider event-building network. Full hardware line rates were sustained, and link utilization rates were competitive relative to other industry options, which is a key to more efficient data center workload optimization.

Finisar Corp. (FNSR) recently recorded -1.56 percent change and currently at \$18.3 is 71.67 percent away from its 52-week low and down -8.77 percent versus its peak. It has a past 5-day performance of 4.93 percent and trades at an average volume of 1.39M shares. The stock has a 1-month performance of 17.01 percent and is 25.86 percent year-to-date as of the recent close. There were about 107.18M shares outstanding which made its market cap \$1.96B. The share price is currently 5.88 percent versus its SMA20, 8.43 percent versus its SMA50, and 27.75 percent versus its SMA200.

On June 16, 2016 **Finisar Corporation (FNSR)** announced financial results for its fourth quarter and full fiscal year 2016, ended May 1, 2016.

"Revenues for our fourth fiscal quarter were \$318.8 million, an increase of \$10.6 million, or 3.1% compared to the prior quarter, primarily driven by growth in demand for 40G and 100G transceivers for datacom applications including CFP, CFP2, CFP4, QSFP and QSFP28 form factors. Better than expected gross margins, due to favorable product mix, and lower expenses resulted in earnings per fully diluted share exceeding the upper end of our prior guidance range," said Jerry Rawls, Finisar's Chief Executive Officer.
